Impact Factors Of Journals 2013:

Springer Handbook of Science and Technology Indicators Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30 This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents, and electronic communications, the individual chapters written by leading experts discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes such as the journal impact factor and the h index, as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification, and database search methods to retrieve patent-related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists, and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

Policy Analysis And Modeling Of The Global Economy: A Festschrift Celebrating Thomas Hertel Peter Dixon, Joseph Francois, Dominique Y Van Der Mensbrugghe, 2020-12-14 This volume honors the extraordinary career of Thomas Hertel It also celebrates the 25th anniversary of the founding of the Global Trade Analysis Project GTAP by Prof Hertel All of those contributing to this volume including Prof Hertel s students and colleagues have benefitted in some ways from the selfless professional generosity and dedication to scientific public goods that have been hallmarks of his career The

book examines the history of the GTAP project the scientific contributions of Prof Hertel and the general application of computational modeling to global economic policy analysis The applications in the volume reflecting the broad contributions made by the GTAP community to global policy analysis range from the impact of globalization on employment to the sustainability impacts of economic integration Human Subject Research for Engineers Joost C.F. de Winter, Dimitra Dodou, 2017-05-17 This Brief introduces engineers to the main principles in ethics research design statistics and publishing of human subject research In recent years engineering has become strongly connected to disciplines such as biology medicine and psychology Often engineers and engineering students are expected to perform human subject research Typical human subject research topics conducted by engineers include human computer interaction e g evaluating the usability of software exoskeletons virtual reality teleoperation modelling of human behaviour and decision making often within the framework of big data research product evaluation biometrics behavioural tracking e g of work and travel patterns or mobile phone use transport and planning e g an analysis of flows or safety issues etc Thus it can be said that knowledge on how to do human subject research is indispensable for a substantial portion of engineers Engineers are generally well trained in calculus and mechanics but may lack the appropriate knowledge on how to do research with human participants In order to do high quality human subject research in an ethical manner several guidelines have to be followed and pitfalls have to be avoided This book discusses these guidelines and pitfalls The aim is to prepare engineers and engineering students to carry out independent research in a responsible manner **How Economics Professors Can Stop Failing Us** Steven

Payson, 2017-08-18 This book provides an eye opening expos on economics professors that will surely shock anyone who is not familiar with the topic and even some of those who are familiar with it It is critical of the behavior of economics professors but is not critical of the field of economics itself In fact the book argues that it is essential for economics professors to improve in the work they perform precisely because of the vital importance of their field Other books that criticize economics professors typically present complex arguments that interest only the most advanced scholars However this book is completely different It is written to be understandable to anyone who has with an interest in economics regardless of their background At the same time the book does include the most relevant scholarly arguments it just presents them in a manner that allows anyone to understand them Also unlike other books on economics **How Economics Professors Can Stop Failing Us** is written in the context of a genuine expos As such it ventures backstage behind the show business that has dominated the profession revealing the profession's deep dark and at times rather ugly secrets The book is able to do this by having an author who has experienced first hand studied and written on this topic area for over three decades who has organized training seminars on it and who has served for over a decade as the Executive Director of the Association for Integrity and Responsible Leadership in Economics While exposing the profession's shameful problems the book also offers great hope in providing realistic solutions to them One of the main solutions it proposes is for economics professors who are

now failing us to follow and learn from those other professors who are not failing us who have instead admirably upheld the principles of professional ethics and scientific integrity In this sense How Economics Professors Can Stop Failing Us offers the most hope and perhaps the only hope for economics professors to improve and to play the responsible role that their students their employers and society overall expects of them

High performance computing for solving large sparse systems. Optical diffraction tomography as a case of study Gloria Ortega López, 2015-04-14 This thesis entitled High Performance Computing for solving large sparse systems Optical Diffraction Tomography as a case of study investigates the computational issues related to the resolution of linear systems of equations which come from the discretization of physical models described by means of Partial Differential Equations PDEs These physical models are conceived for the description of the space temporary behavior of some physical phenomena $f(x, y, z, t)$ in terms of their variations partial derivative with respect to the dependent variables of the phenomena There is a wide variety of discretization methods for PDEs Two of the most well known methods are the Finite Difference Method FDM and the Finite Element Method FEM Both methods result in an algebraic description of the model that can be translated into the approach of a linear system of equations of type $Ax = b$ where A is a sparse matrix a high percentage of zero elements whose size depends on the required accuracy of the modeled phenomena This thesis begins with the algebraic description of the model associated with the physical phenomena and the work herein has been focused on the design of techniques and computational models that allow the resolution of these linear systems of equations The main interest of this study is specially focused on models which require a high level of

discretization and usually generate sparse matrices A which have a highly sparse structure and large size Literature characterizes these types of problems by their high demanding computational requirements because of their fine degree of discretization and the sparsity of the matrices involved suggesting that these kinds of problems can only be solved using High Performance Computing techniques and architectures One of the main goals of this thesis is the research of the possible alternatives which allow the implementation of routines to solve large and sparse linear systems of equations using High Performance Computing HPC The use of massively parallel platforms GPUs allows the acceleration of these routines because they have several advantages for vectorial computation schemes On the other hand the use of distributed memory platforms allows the resolution of problems defined by matrices of enormous size Finally the combination of both techniques distributed computation and multi GPUs will allow faster resolution of interesting problems in which large and sparse matrices are involved In this line one of the goals of this thesis is to supply the scientific community with implementations based on multi GPU clusters to solve sparse linear systems of equations which are the key in many scientific computations The second part of this thesis is focused on a real physical problem of Optical Diffractional Tomography ODT based on holographic information ODT is a non damaging technique which allows the extraction of the shapes of objects with high accuracy Therefore this technique is very suitable to the in vivo study of real specimens microorganisms etc and it also makes the investigation of their dynamics possible A preliminary physical model based on a bidimensional reconstruction of the seeding particle distribution in fluids was proposed by J Lobera and J M Coupland However its high computational cost in both memory requirements and runtime made compulsory the use of HPC techniques to extend the implementation to a three dimensional model In the second part of this thesis the implementation and validation of this physical model for the case of three dimensional reconstructions is carried out In such implementation the resolution of large and sparse linear systems of equations is required Thus some of the algebraic routines developed in the first part of the thesis have been used to implement computational strategies capable of solving the problem of 3D reconstruction based on ODT

Handbook of Bibliometric Indicators Roberto Todeschini, Alberto Baccini, 2016-05-04 At last the first systematic guide to the growing jungle of citation indices and other bibliometric indicators Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions In 150 major articles the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit From widely used measures such as the journal impact factor or the h index to highly specialized indices all indicators currently in use in the sciences and humanities are described and their application explained The introductory section and the appendix contain a wealth of valuable supporting information on data sources tools and techniques for bibliometric and scientometric analysis for individual researchers as well as their funders and publishers

Unconventional Methodology

in Organization and Management Research Alan Bryman, David A. Buchanan, 2018-03-21 Most researchers in organization and management studies stick to two or three traditional research methods like surveys and interviews. Sticking with the familiar is seen as a safe bet and innovation is discouraged by academic incentives and rewards. But research participants are now suffering from survey fatigue and using the same old methods runs the risk of generating the same old findings. This book describes twelve unconventional methodologies in organization and management research. These include unconventional research settings and data sources, unconventional research designs and data collection methods, unconventional analytic approaches and designs, and methods that exploit new technology developments. The aim is to encourage dialogue and experimentation with regard to the development of innovative unconventional approaches to organization and management research. Several commentators have criticized the way in which research methods have become more formulaic and have argued for greater diversity in research approaches. The methodological perspective that we adopt shapes our interpretation of the information that we gather. Different methods generate different kinds of information leading to different ways of understanding the phenomena that we are investigating. Our methods influence our styles of theorizing, ways of thinking and reasoning, and forms of writing and reporting research. This book will be of value to academic researchers in organization and management studies, Doctoral candidates and Masters students on MBA and similar programmes.

Library and Information Sciences Chuanfu Chen, Ronald Larsen, 2014-09-30 This book explores the development trends and research of library and information sciences (LIS) in the digital age. Inside, readers will find research and case studies written by LIS experts, educators, and theorists, most of whom have visited China, delivered presentations there, and drafted their articles based on feedback they received. As a result, readers will discover the LIS issues and concerns that China and the international community have in common. The book first introduces the opportunities and challenges faced by the library and information literacy profession and discusses the key role of librarians in the future of information literacy education. Next, it covers trends in LIS education by examining the vision of the iSchool movement and detailing its practice in Syracuse University. The book then covers issues in information seeking and retrieval by showing how visual data mining technology can be used to detect the relationship and pattern between terms on the Q & A of a social media site. It also includes a case study regarding tracing information seeking behavior and usage on a multimedia website. Next, the book stresses the importance of building an academic accreditation framework for scientific datasets, explores the relationship between bibliometrics and university rankings, and details the birth and development of East Asian Libraries in North America. Overall, the book offers readers insight into the changing nature of LIS, including the electronic dissemination of information, the impact of the Internet on libraries, the changing responsibilities of library professionals, the new paradigm for evaluating information, and characteristics and functions of today's library personnel.
