

## Self-Contained PIR Ceiling Mount Occupancy Sensor

### Description

The Leviton Self-Contained PIR Ceiling Mount Occupancy Sensor (ODC05-I) uses passive infrared (PIR) detection technology to monitor a room for occupancy through a segmented Fresnel lens. This specialized lens divides the field-of-view into sensor zones. When a person passes into or out of a sensor zone, the sensor detects motion and switches its lighting loads ON. The lights will remain ON as long as there is an occupant moving through the sensor zones.

### Applications

The ODC05-I is a cost-effective choice for commercial and institutional installations, where installation of the recessed ceiling unit is difficult, inconvenient or costly. Available in 120V, 220V and 277V versions, the ODC05-I is ideal for:

- Storage areas
- Small bathrooms
- Retrofit
- Copy rooms
- Utility closets
- Small spaces without wall switches.

The ODC05-I does not require an external control unit for power or switching the load ON and OFF.

### Installation

Sensor unit is in a ceiling area that provides a full view of the space with an unobstructed path to the entrance way(s), but out of line from hallway traffic. The sensor should be positioned at least 6 feet from HVAC registers to prevent false triggering. The ODC05-I may be mounted directly to a three or four-inch octagon box. The sensor wires directly to the lighting fixtures. An ODCOG protective cage is recommended to guard against accidental breakage.

### Features

- Sensor and switching relay in one unit—reduces labor and need for additional materials
- 360° field-of-view with approximately 530-sq. ft. of coverage when mounted at 8 ft. This reduces the number of additional sensors typically required in many spaces.
- Adjustable Delayed-OFF time setting between 20 seconds and 15 minutes allows custom adjustment for maximum savings
- Light Sensor - an ambient light override option can be set between 2 and 500+ foot candles and full brightness to prevent the sensor from switching lights ON when ample natural sunlight is available. Hold-OFF feature
- Segmented Fresnel lens contains 79 segments for optimum sensitivity and detection performance
- A standard A/C toggle switch may be used to provide manual-OFF override so that lights may be switched OFF
- Red-LED indicator light flashes when sensor detects motion, to verify power placement and function of sensor at installation
