

Environmental Management: it's Characteristics and Objectives

Environmental management is the process of allocating natural and man-made resources so as to make optimum use of the environment in satisfying not only the present basic human needs but of the coming generations also.

This management implies an element of conscious choice from a variety of alternative proposals and furthermore that such a choice involves purposeful commitment to recognised and desired objectives.

Environmental management is not merely a management of environment but it is essentially the management of various activities with intolerable constraints imposed by the environment itself and with full consideration of ecological factors. Thus, it involves environmental planning, conservation of resources, environmental status evaluation, and environmental legislation and administration.

The focus of environmental management is on implementation, monitoring and auditing; on practice and coping with real-world issues, rather than theoretical planning. A close integration with environmental planning is desirable.

Thus, as stated earlier, environmental management is a field of study dedicated to understanding human-environment interactions and the application of science and common-sense to solving problems.

The characteristic features of the environmental management are:
ADVERTISEMENTS:

1. It deals with a world affected by humans;
2. It supports sustainable development;
3. It demands a multidisciplinary approach;
