Navneet Singh, Here are some common Spring Boot interview questions along with their answers

What is Spring Boot? Spring Boot is an open source Java based framework used to create stand alone production grade Spring based applications with minimal setup and configuration

What are the key features of Spring Boot? Some key features include Auto configuration It automatically configures the Spring application based on dependencies present in the class path Starter dependencies Pre configured dependencies to simplify dependency management Embedded servers It provides support for embedding servlet containers like Tomcat Jetty and Undertow Production ready features It includes features like metrics health checks and externalized configuration

Explain the difference between Spring and Spring Boot Spring is a comprehensive framework for building enterprise level Java applications while Spring Boot is an extension of the Spring framework that simplifies the process of building and deploying Spring applications by providing defaults for configuration and eliminating boilerplate code

How does Spring Boot simplify the development process? Spring Boot simplifies development by providing defaults for configuration reducing the amount of boilerplate code and offering a range of pre built features and plugins

What is Spring Boot Starter? Spring Boot Starter is a set of convenient dependency descriptors that you can include in your application You can add starters to your application s class path and Spring Boot will automatically configure the appropriate dependencies based on the libraries present

How does Spring Boot handle configuration? Spring Boot uses convention over configuration and auto configuration to minimize the need for explicit configuration It provides sensible defaults for configuration and automatically configures components based on the classpath and application properties

What is Spring Boot Actuator? Spring Boot Actuator is a set of production ready features that help you monitor and manage your application It includes endpoints for health checks metrics info environment details and more

Explain the difference between Component Service Repository and Controller annotations in Spring Boot Component is a generic stereotype annotation for any Spring managed component Service is used to mark a class as a service component in the business layer Repository is used to mark a class as a data access component in the persistence layer Controller is used to mark a class as a controller component in the presentation layer typically for handling HTTP requests

How does Spring Boot support testing? Spring Boot provides support for unit testing integration testing and end to end testing using frameworks like JUnit Mockito and Spring Boot Test It includes features like `SpringBootTest` annotation for loading Spring application contexts `MockBean` annotation for mocking beans and `TestRestTemplate` for testing RESTful endpoints

What is Spring Boot CLI? Spring Boot CLI Command Line Interface is a command line tool that allows you to quickly develop Spring Boot applications using Groovy scripts It provides features like auto restart dependency management and more directly from the command line

These questions cover some of the fundamental aspects of Spring Boot that are commonly asked in interviews Make sure to understand these concepts thoroughly and be prepared to provide examples or elaborate on them during interviews

Representational State Transfer is an architectural style for designing networked applications RESTful services are web services that use HTTP methods GET POST PUT DELETE for communication They operate on resources identified by URLs and typically exchange data in formats like JSON or XML

How does a VPN work Answer A VPN Virtual Private Network creates a secure connection over a public network such as the internet It uses encryption to protect data transmitted between the user's device and the VPN server This ensures privacy and security allowing users to access resources as if they were on a private network

What is cloud computing Answer Cloud computing is the delivery of computing services servers storage databases networking software analytics and more over the internet the cloud It offers faster innovation flexible resources and economies of scale Users typically pay only for cloud services they use helping to lower operating costs and run infrastructure more efficiently

Behavioural Questions Can you describe a time when you had to troubleshoot a difficult problem Answer Certainly At my previous job we had an issue where our main application server was intermittently crashing causing significant downtime I systematically analysed the server logs and used diagnostic tools to narrow down the issue to a memory leak in one of our recently deployed modules I worked with the development team to patch the module which resolved the issue and improved our system's stability

How do you stay updated with the latest technology trends Answer I regularly follow industry news through tech blogs podcasts and websites like TechCrunch and Wired I also participate in online courses and attend webinars and conferences

Engaging in professional forums and communities like Stack Overflow and GitHub also helps me stay informed and connected with other professionals

Describe a project you have worked on and your role in it Answer I recently worked on a project to migrate our company's on-premises data infrastructure to AWS My role was to design the architecture set up the AWS environment and lead the data migration process I coordinated with various teams to ensure minimal downtime and trained staff on using the new cloud-based tools The project improved our scalability and reduced our infrastructure costs by 30%

How do you prioritize tasks when you have multiple deadlines Answer I prioritize tasks based on their urgency and impact I use tools like Trello or Jira to manage my tasks and deadlines For critical projects I break them down into smaller manageable tasks and focus on completing high priority items first

Effective communication with my team also ensures we're aligned on priorities and deadlines

How do you handle working under pressure Answer I stay calm and focused by breaking down the problem into smaller tasks and tackling them one at a time I also prioritize tasks and delegate when possible Taking short breaks to clear my mind helps me stay productive

Communicating effectively with my team and stakeholders ensures everyone is aware of progress and any potential delays

Scenario Based Questions You discover a critical security vulnerability in a deployed application What steps do you take Answer First I would assess the vulnerability's impact and severity Then I would notify relevant stakeholders and work with the development team to develop and test a patch If necessary I would take immediate action to mitigate the risk such as temporarily disabling the affected feature After deploying the patch I would conduct a thorough review to ensure the issue is

resolved and update our security protocols to prevent future vulnerabilities How would you handle a situation where a key project is falling behind schedule Answer I would first analyse the reasons for the delay by reviewing the project plan and speaking with team members I would then identify critical tasks and reallocate resources or adjust priorities to get back on track Communicating with stakeholders about the delay and the steps being taken to address it is crucial If necessary I would also consider extending deadlines or bringing in additional help to ensure the project s success

Technical Test Problem Solving Write a function to reverse a string in Python Python Describe how you would design a scalable web application Answer I would start with a microservices architecture breaking down the application into smaller independent services Each service would be containerized using Docker and managed with Kubernetes for orchestration I would use a load balancer to distribute traffic evenly and ensure high availability Data storage would be handled by a combination of relational and NoSQL databases depending on the requirements For scaling I would use auto scaling groups and implement caching mechanisms like Redis or Memcached to reduce database load Monitoring and logging tools like Prometheus and ELK stack would be used to track performance and troubleshoot issues
