The ASTD Reference Guide to Professional Training Roles & Competencies Henry J. Sredl,1987

Generalized Characteristics of First Order PDEs Arik Melikyan,2012-12-06 In some domains of mechanics physics and control theory boundary value problems arise for nonlinear first order PDEs A well known classical result states a sufficiency condition for local existence and uniqueness of twice differentiable solution This result is based on the method of characteristics MC Very often and as a rule in control theory the continuous nonsmooth non differentiable functions have to be treated as a solutions to the PDE At the points of smoothness such solutions satisfy the equation in classical sense But if a function satisfies this condition only with no requirements at the points of nonsmoothness the PDE may have nonunique solutions The uniqueness takes place if an appropriate matching principle for smooth solution branches defined in neighboring domains is applied or in other words the notion of generalized solution is considered In each field an appropriate matching principle are used In Optimal Control and Differential Games this principle is the optimality of the cost function In physics and mechanics certain laws must be fulfilled for correct matching A purely mathematical approach also can be used when the generalized solution is introduced to obtain the existence and uniqueness of the solution without being aimed to describe to model some particular physical phenomenon Some formulations of the generalized solution may meet the modelling of a given phenomenon the others may not

Turn-taking in human communicative interaction Judith Holler,Kobin H. Kendrick,Marisa Casillas,2016-05-09

The core use of language is in face

to face conversation This is characterized by rapid turn taking This turn taking poses a number central puzzles for the psychology of language Consider for example that in large corpora the gap between turns is on the order of 100 to 300 ms but the latencies involved in language production require minimally between 600 ms for a single word or 1500 ms for as simple sentence This implies that participants in conversation are predicting the ends of the incoming turn and preparing in advance But how is this done What aspects of this prediction are done when What happens when the prediction is wrong What stops participants coming in too early If the system is running on prediction why is there consistently a mode of 100 to 300 ms in response time The timing puzzle raises further puzzles it seems that comprehension must run parallel with the preparation for production but it has been presumed that there are strict cognitive limitations on more than one central process running at a time How is this bottleneck overcome Far from being easy as some psychologists have suggested conversation may be one of the most demanding cognitive tasks in our everyday lives Further questions naturally arise how do children learn to master this demanding task and what is the developmental trajectory in this domain Research shows that aspects of turn taking such as its timing are remarkably stable across languages and cultures but the word order of languages varies enormously How then does prediction of the incoming turn work when the verb often the informational nugget in a clause is at the end Conversely how can production work fast enough in languages that have the verb at the beginning thereby requiring early planning of the whole clause What happens when one changes modality as in sign languages with the loss of channel constraints is turn taking much freer And what about face to face communication amongst hearing individuals do gestures gaze and other body behaviors facilitate turn taking One can also ask the phylogenetic question how did such a system evolve There seem to be parallels analogies in duetting bird species and in a variety of monkey species but there is little evidence of anything like this among the great apes All this constitutes a neglected set of problems at the heart of the psychology of language and of the language sciences This Research Topic contributes to advancing our understanding of these problems by summarizing recent work from psycholinguists developmental psychologists students of dialog and conversation analysis linguists phoneticians and comparative ethologists
