A 61-year-old patient with suspected bowel obstruction had a nasogastric tube inserted at 4:00 AM. The nurse shares in the morning report that the day shift staff should check the tube for patency at what times?

- A. 7:00 AM, 10:00 AM, and 1:00 PM
- B. 8:00 AM, 12:00 PM, and 4:00 PM
- C. 9:00 AM and 3:00 PM
- D. 9:00 AM, 12:00 PM, and 3:00 PM

B. 8:00 AM, 12:00 PM, and 4:00 PM

A nasogastric tube should be checked for patency routinely at 4-hour intervals. Thus if the tube were inserted at 4:00 AM, it would be due to be checked at 8:00 AM, 12:00 PM, and 4:00 PM.

A 72-year-old patient was admitted with epigastric pain due to a gastric ulcer. Which patient assessment warrants an urgent change in the nursing plan of care?

- A. Chest pain relieved with eating or drinking water
- B. Back pain 3 or 4 hours after eating a meal
- C. Burning epigastric pain 90 minutes after breakfast
- D. Rigid abdomen and vomiting following indigestion

D. Rigid abdomen and vomiting following indigestion

A rigid abdomen with vomiting in a patient who has a gastric ulcer indicates a perforation of the ulcer, especially if the manifestations of perforation appear suddenly. Mid-epigastric pain is relieved by eating, drinking water, or antacids with duodenal ulcers, not gastric ulcers. Back pain 3-4 hours after a meal is more likely to occur with a duodenal ulcer. Burning epigastric pain 1-2 hours after a meal is an expected manifestation of a gastric ulcer related to increased gastric secretions and does not cause an urgent change in the nursing plan of care.

After administering a dose of promethazine (Phenergan) to a patient with nausea and vomiting, what common temporary adverse effect of the medication does the nurse explain may be experienced?

- A. Tinnitus
- B. Drowsiness
- C. Reduced hearing
- D. Sensation of falling

B. Drowsiness

Although being given to this patient as an antiemetic, promethazine also has sedative and amnesic properties. For this reason, the patient is likely to experience drowsiness as an adverse effect of the medication. Tinnitus, reduced hearing, and loss of balance are not side effects of promethazine.

After the nurse teaches a patient with gastroesophageal reflux disease (GERD) about recommended dietary modifications, which statement by the patient indicates that the teaching has been effective?

- A. "I can have a glass of low-fat milk at bedtime."
- B. "I will have to eliminate all spicy foods from my diet."
- C. "I will have to use herbal teas instead of caffeinated drinks."
- D. "I should keep something in my stomach all the

C. "I will have to use herbal teas instead of caffeinated drinks."

Rationale: Patients with gastroesophageal reflux disease should avoid foods (such as tea and coffee) that decrease lower esophageal pressure. Patients should also avoid milk, especially at bedtime, as it increases gastric acid secretion. Patients may eat spicy foods, unless these foods cause reflux. Small, frequent meals help prevent overdistention of the stomach, but patients should avoid late evening meals and nocturnal snacking.
