 comprehensive and state of the art information *Redefining Recovery from Aphasia* Dalia Cahana-Amitay, Martin L.
 Albert, 2015 This book focuses on two fundamental aspects of brain language relations one concerns the neural organization
 of language in the healthy brain the other challenges current approaches to treatment of aphasia and offers a new theory for
 recovery from aphasia The essence of the book lies in the phrase neural multifunctionality the constant and dynamic
 incorporation of non linguistic functions into language models of the intact brain The book makes the claim that language is a
 construction created as we use it and cannot be understood as being supported by neurally based linguistic networks only
 Rather language emerges from the constant and dynamic interaction among neural networks subserving cognitive affective
 and praxic functions with neural networks subserving lexical retrieval naming sentence processing comprehension and
 discourse communication conversation In persons with stroke induced aphasia neural networks for executive system function
 attention memory motor system function visual system function and emotion interact with neural networks for language to
 produce the aphasia profile and to influence recovery from aphasia Consequently neural multifunctionality in aphasia
 explains individual differences in the lesion deficit model and continued recovery over time redefining the concept of
 recovery from aphasia and offering new opportunities for treatment **Assessment of Malingered Neuropsychological
 Deficits** Glenn J. Larrabee, 2007-07-16 Written specifically for the clinical neuropsychologist who does forensic consultations
 the book is a comprehensive review by experts of the procedures available to evaluate malingered neuropsychological
 deficits It discusses tools for detecting atypical patterns of performance on standard clinical tests as well as malingering on
 measures of perception and sensorimotor function of attention processing speed and memory and of executive function The
 underpinnings of the forensic neuropsychology enterprise are presented in chapters on definitions of malingering research
 designs for its evaluation data on the frequency with which malingering occurs diagnostic classification statistics symptom
 validity tests that do not depend on forced choice testing and those that do Guidance on assessing exaggerated psychiatric
 symptoms exaggerated medical symptoms and injuries and detecting malingering during the neurological exam is also
 included Of particular note is a chapter devoted to the topic of coaching The book closes with a review of the diagnostic
 criteria for malingering and looks to the future with evidence based proposals for improving the criteria
