Mangrove Ecosystems Volker Linneweber,2013-06-29 Protection of the environment has nowadays become a major challenge and a condition for survival of future human generations and life on Earth in general Yet it is still far too much of a dream or hope rather than a reality in the policy of our societies Presently we are experiencing an unprecedented exponential growth of demography combined with a race for profit resulting in excessive consumption particularly of energy and a serious impact on the world ecosystems Various types of pollutants and emerging new diseases not only disrupt the normal course of life but also above this some of the atmospheric pollutants are most likely involved in the changing climate We fear and literally shiver at the thought that the changing climate would ultimately disrupt the fragile thermodynamic equilibrium between the atmosphere and the oceans Are we insensitive to these facts to the point of pushing our descendants some generations ahead into a new glacial period after a first period of warming up at least in northern Europe like the one that took place 13 to 14 millennia ago Surely the planet's nature is not prepared to be dominated by man and will go its way whether humanity will be alive or dead **The Wireless World and Radio Review** ,1927 [Monthly Weather Review](#) ,1917
