MCSE Study Guide Joe Casad, 1996 Get it done well and get it done fast are twin apparently opposing demands Data architects are increasingly expected to deliver quality data

models in challenging timeframes and agile developers are increasingly expected to ensure that their solutions can be easily integrated with the data assets of the overall organization. If you need to deliver quality solutions despite exacting schedules, The Nimble Elephant will help by describing proven techniques that leverage the libraries of published data model patterns to rapidly assemble extensible and robust designs. The three sections in the book provide guidelines for applying the lessons to your own situation so that you can apply the techniques and patterns immediately to your current assignments. The first section, Foundations for Data Agility, addresses some perceived aspects of friction between data and agile practitioners. As a starting point for resolving the differences, pattern levels of granularity are classified and their interdependencies exposed. A context of various types of models is established, e.g., conceptual, logical, physical, and industry enterprise project, and you will learn how to customize patterns within specific model types. The second section, Steps Towards Data Agility, shares guidelines on generalizing and specializing with cautions on the dangers of going too far. Creativity in using patterns beyond their intended purpose is encouraged. The short-term 'You Ain't Gonna Need It' (YAGNI) philosophy of agile practitioners and the longer-term strategic perspectives of architects are compared and evaluated. Consideration is given to the potential of enterprise views contributing to project-specific models. Other topics include industry models, iterative modeling, creation of patterns when none exist, and patterns for rules in data. The section ends with a perspective on the modeler's possible role in agile projects, followed by a case study. The final section, A Bridge to the Land of Object Orientation, provides a pathway for re-skilling traditional data modelers who want to expand their options by actively engaging with the ranks of object-oriented developers.
