

Algebra 2 Unit 12: Statistics Notes

Variability and Sampling

Data is everywhere. It's in our newspapers, it's in our science classes, it shows up in economics, statistics and sometimes almost variability occurs. Variability is simply the property of outcomes being different. The tools of statistics are designed to explain this variability. There are many types of variability. It is good to understand these sources in order to understand the problem we are trying to solve.

Example 1 The following types of variability can change variability of a data set. For each, give an example from your field.

(1) Observational or Measurement Variability: Variability that is introduced due to either the measuring instruments and being process (e.g., or differences in how individual people read the measurements.

2 student's measure time for a ball to roll down a ramp
→ different reaction times

(2) Natural Variability or Inherent Individual Variability: Variability that occurs in the data due the structure of populations or sample different.

2 people work out same amount of time
→ different people lose different amounts of weight

(3) Treatment Variability: This type of variability is the result of some additional factor. It can arise because we have assigned our populations or samples to two or more treatment groups and these affect the variability between the groups.

2 groups taking a test, one group allowed to sleep 8 hours, other group only 4 hours → different scores

(4) Sample Variability: This is the type of variability that occurs when we take multiple samples from a population randomly. There is always will be different due to the randomness of the samples or errors.

Multiple samples of people surveyed to determine political candidate preference.

Remember, through all of our work in this unit, we are really trying to explain the variability of data within either a population or a sample and then using this to determine if the variability can be attributed to one of the factors above or the structure of the data.

Differentiating Instruction in Algebra 1 Kelli Jurek, 2021-09-03 Teachers often have too little time to prepare differentiated lessons to meet the needs of all students. *Differentiating Instruction in Algebra 1* provides ready-to-use resources for Algebra 1 students. The book is divided into four units: introduction to functions and relationships; systems of linear equations; exponent rules and exponential functions; and quadratic functions. Each unit includes big ideas, essential questions, the Common Core State Standards addressed within that section, pretests, learning targets, varied activities, and answer keys. The activities offer choices to students or three levels of practice based on student skill level. *Differentiating Instruction in Algebra 1* is just the resource math teachers need to provide exciting and challenging algebra activities for all students. Strengthening Mathematical Reasoning among Middle School Students with Hidden or Unmet Potential Peter Sheppard, Melissa A. Gallagher, 2019-11-08 This work seeks to contribute to the national dialogue regarding best practices in teaching middle school mathematics. The authors are committed to improving mathematics achievement and opportunities for students whose inherited circumstances place them at a perceptible disadvantage. Most refer to said students as risks. We hold the position that these students, irrespective of their backgrounds, possess Hidden or Unmet Potential and the unveiling of their potential can be accelerated when they are exposed to high quality mathematics teaching. This book is a practitioner's guide to creative mathematics activities centered on algebraic, proportional, and geometric reasoning aligned with mathematics standards. This approach has the potential to accelerate the mathematical confidence and accentuate the
