Endocrine System and Endocrine Regulation

Background

The endocrine system has regulatory networks of glands, hormones and receptors. Together, the two components and interact with external physical surroundings and biologically chemicals as reproductive, sensory, metabolic and homeostatic.

Basically, all endocrine system within animals, there are two main systems controlling each controlling the processes within body.

1. The endocrine system, which is the major part of the system, is composed of glands that secrete hormones, which are chemical messengers that travel through the bloodstream to target organs or cells.
2. The endocrine system, which is a network of glands that secrete hormones, which are chemical messengers that travel through the bloodstream to target organs or cells.

The endocrine system is the major part of the system, which is composed of glands that secrete hormones, which are chemical messengers that travel through the bloodstream to target organs or cells.

The endocrine system is the major part of the system, which is composed of glands that secrete hormones, which are chemical messengers that travel through the bloodstream to target organs or cells.

PART 2: The Glands and their Associated Hormones

1. Identify the glands and their associated hormones.

2. Label the following endocrine glands.
