Knowledge Creation in Education Seng Chee Tan, Hyo Jeong So, Jennifer Yeo, 2014-06-12 This book arises from research conducted through Singapore's National Institute of Education on such topics as integrating knowledge building pedagogies into Singaporean classrooms with both students and teachers across school levels from primary schools to high schools. Additionally, international scholars contribute research on theories of knowledge creation, methodological foundations of research on knowledge creation, knowledge creation pedagogies in classrooms, and knowledge creation work involving educators. The book is organized in two sections. Section A focuses on theoretical, technological, and methodological issues where sources of justification for claims are predominantly theories and extant literature, although empirical evidence is used extensively in one chapter. Section B reports knowledge creation practices in schools with teachers, students, or both; the key sources of justification for claims are predominantly empirical evidence and narratives of experience. The editor asserts that schools should focus on developing students' capacity and disposition in knowledge creation work at the same time; leaders and teachers alike should continue to develop their professional knowledge as a community. In the knowledge building vernacular, the chapters are knowledge artifacts—artifacts that not only document the findings of the editors and authors but that also mediate future advancement in this area of research work. The ultimate aim of the book is to inspire new ideas and to illuminate the path for researchers of similar interest in knowledge creation in education.

Computational Fluid Dynamics and Energy Modelling in Buildings Parham A. Mirzaei, 2023-01-24 COMPUTATIONAL FLUID DYNAMICS AND ENERGY MODELLING IN BUILDINGS: A Comprehensive Overview of the Fundamentals of Heat and Mass Transport Simulation and Energy Performance in Buildings. In the first part of *Computational Fluid Dynamics and Energy Modelling in Buildings: Fundamentals and Applications*, the author explains the fundamentals of fluid mechanics, thermodynamics, and heat transfer with a specific focus on their application in buildings. This background knowledge sets the scene to further model heat and mass transport in buildings with explanations of commonly applied simplifications and assumptions. In the second part, the author elaborates how the fundamentals explained in part 1 can be used to model energy flow in buildings, which is the basis of all commercial and educational building energy simulation tools. An innovative illustrative nodal network concept is introduced to help readers comprehend the basics of conservation laws in buildings. The application of numerical techniques to form dynamic simulation tools are then introduced. In general, understanding these techniques will help readers to identify and justify their choices when working with building energy simulation tools rather than using default settings. Detailed airflow information in buildings cannot be obtained in building energy simulation techniques. Therefore, part three is focused on introducing computational fluid dynamics (CFD) as a detailed modelling technique for airflow in buildings. This part starts with an introduction to the fundamentals of the finite volume method used to solve the governing fluid equations, and the related challenges and considerations are discussed. The last chapter of this part covers the solutions to some practical

problems of airflow within and around buildings The key aspect of Computational Fluid Dynamics and Energy Modelling in Buildings Fundamentals and Applications is that it is tailored for audiences without extensive past experience of numerical methods Undergraduate or graduate students in architecture urban planning geography architectural engineering and other engineering fields along with building performance and simulation professionals can use this book to gain additional clarity on the topics of building energy simulation and computational fluid dynamics **Fossil Energy Update** ,1977
