

MODEL BUILDERS' MANUAL

Mart Irvine has been involved with model making over most of his lifetime. He started with small models built from Plastine, but soon progressed to models in the Airfix catalogue, scouring Woodworths in his local town when new models became available each month. He then moved from 'amateur' to 'professional', when he joined the BBC Visual Effects Department in his early twenties. Here, the work covered all aspects of special effects, not just model making, though that was an important part, and he designed 'miniature' sequences for such as *Doctor Who* and *Blake's 7* and science programmes including *Tomorrow's World*, *Horizon*, *The Sky at Night*, and much more besides. He also worked as Effects Designer for the multi-award winning *Edge of Darkness*, in which he briefly appeared.

Mart regularly appeared in front of cameras for Saturday morning programmes such as *Sleep Shop* and *Saturday Superstore*, demonstrating model-building techniques. He co-presented the design and technology series *Technic*, and directed the 'Stamen' episode of the BBC series *Future Fantastic*, and he has talked on model-making and effects at many conventions, and lectured at several universities.

Mart has acted as a consultant with many of the model-making companies around the world. He has written 15 books, a number on model building, and many hundreds of articles for model magazines.

Model-making is centuries old, but the introduction of polystyrene – a stable plastic – in the mid-20th century, provided the opportunity to make the 'plastic construction kit' available to the amateur model-maker. Nearly 70 years later, despite suffering from ups-and-downs, the vibrant plastic model-making scene has grown tremendously and is now a world-wide hobby.

This manual takes the reader through how modern model kits are designed and manufactured, how the scale is decided upon (most modern kits are made to established scales so that models and accessories are compatible with one another), as well as providing advice on model-building tools and techniques. The down-to-earth text, complemented by numerous photographs, provides details of the ideal 'workshop' set-up for building models; tools and adhesives required; paint types and application techniques – from brushing to using aerosol cans, airbrushing and paint booths; the wide variety of decals available, and how to make your own; basic building techniques, and how to construct dioramas to put models into an appropriate 'setting'.

In recent years the growth of 'multi-material' kits has become far more common, and details are provided of 'non-plastic' materials, such as resins, white metal and photo-etch parts, all of which need to be dealt with slightly differently to polystyrene.

A comprehensive introduction for those new to model-making, along with expert advice for those already experienced in making models who wish to hone their skills.

- **The world of model making** History of model-making, kit manufacture, scales, model ranges.
- **Model building** Places to work, tools, adhesives, paint, decals, basic building techniques, displays and dioramas, advanced techniques and alternative materials, collecting kits, clubs, competition, displays and photography.
- **Useful contacts** Model companies and suppliers.
