3-11.

The members of a truss are pin connected at joint  $O$ . Determine the magnitudes of  $F_1$  and  $F_2$  for equilibrium. Set  $\alpha = 40^\circ$ .

## SOLUTION

$$\sum \rightarrow F_x = 0; \quad F_2 \sin 70^\circ + F_1 \sin 40^\circ - 5 \sin 30^\circ - \frac{4}{5}(1) = 0$$

$$0.9397F_2 + 0.6428F_1 = 4.500$$

$$+\circlearrowleft F_y = 0; \quad F_2 \cos 30^\circ + 5 \sin 30^\circ - F_1 \sin 40^\circ - \frac{3}{5}(1) = 0$$

$$0.8660F_2 - 0.6428F_1 = 1.7$$

Solving:

$$F_2 = 9.60 \text{ kN}$$

$$F_1 = 1.83 \text{ kN}$$

*Continuous System Simulation* François E. Cellier, Ernesto Kofman, 2006-06-03 Continuous System Simulation describes systematically and methodically how mathematical models of dynamic systems usually described by sets of either ordinary or partial differential equations possibly coupled with algebraic equations can be simulated on a digital computer Modern modeling and simulation environments relieve the occasional user from having to understand how simulation really works Once a mathematical model of a process has been formulated the modeling and simulation environment compiles and simulates the model and curves of result trajectories appear magically on the user's screen Yet magic has a tendency to fail and it is then that the user must understand what went wrong and why the model could not be simulated as expected Continuous System Simulation is written by engineers for engineers introducing the partly symbolical and partly numerical algorithms that drive the process of simulation in terms that are familiar to simulation practitioners with an engineering background and yet the text is rigorous in its approach and comprehensive in its coverage providing the reader with a thorough and detailed understanding of the mechanisms that govern the simulation of dynamical systems Continuous System Simulation is a highly software oriented text based on MATLAB Homework problems suggestions for term project and open research questions conclude every chapter to deepen the understanding of the student and increase his or her motivation Continuous System Simulation is the first text of its kind that has been written for an engineering audience primarily Yet due to the depth and breadth of its coverage the book will also be highly useful for

readers with a mathematics background The book has been designed to accompany senior and graduate students enrolled in a simulation class but it may also serve as a reference and self study guide for modeling and simulation practitioners

Dynamics of Parallel Robots Stefan Staicu, 2018-09-14 This book establishes recursive relations concerning kinematics and dynamics of constrained robotic systems It uses matrix modeling to determine the connectivity conditions on the relative velocities and accelerations in order to compare two efficient energetic ways in dynamics modeling the principle of virtual work and the formalism of Lagrange's equations First a brief fundamental theory is presented on matrix mechanics of the rigid body which is then developed in the following five chapters treating matrix kinematics of the rigid body matrix kinematics of the composed motion kinetics of the rigid body dynamics of the rigid body and analytical mechanics By using a set of successive mobile frames the geometrical properties and the kinematics of the vector system of velocities and accelerations for each element of the robot are analysed The dynamics problem is solved in two energetic ways using an approach based on the principle of virtual work and applying the formalism of Lagrange's equations of the second kind These are shown to be useful for real time control of the robot's evolution Then the recursive matrix method is applied to the kinematics and dynamics analysis of five distinct case studies planar parallel manipulators spatial parallel robots planetary gear trains mobile wheeled robots and finally two module hybrid parallel robots

#### **Distributed Transfer Function**

**Theory of Gyroscopic Effects for Rotating Objects** Ryspek Usubamatov, 2022-06-30 This book highlights an analytical solution for the dynamics of axially rotating objects It also presents the theory of gyroscopic effects explaining their physics and using mathematical models of Euler's form for the motion of movable spinning objects to demonstrate these effects The major themes and approaches are represented by the spinning disc and the action of the system of interrelated inertial torques generated by the centrifugal and Coriolis forces as well as the change in the angular momentum The interrelation of inertial torques is based on the dependency of the angular velocities of the motions of the spinning objects around axes by the principle of mechanical energy conservation These kinetically interrelated torques constitute the fundamental principles of the mechanical gyroscope theory that can be used for any rotating objects of different designs like rings cones spheres paraboloids propellers etc Lastly the mathematical models for the gyroscopic effects are validated by practical tests The 2nd edition became necessary due to new development and corrections of mathematical expressions It contains new chapters about the Tippe top inversion and inversion of the spinning object in an
