A file extension, also known as a file ending or a name extension, is the letter or combination of letters that follow the period in a full file title. The file extension assists a computer system, such as Windows and macOS, in determining which software on the system is connected with the file. File extensions frequently, but not always, reflect the file format, or file type, of the item. The extension of any document can be changed, but this does not transform the file to another form or alter anything about the document other than this component of its name.

A file header may be used to identify many different sorts of files. A file header is a signature placed at the start of a file that tells the computer system and other applications what to do with the information that precedes it. The file header will be used by many electronic discovery programs to validate file kinds. The prevalent concern is that if a custodian modifies a file's suffix or the file is not titled using a software's normal naming scheme, the file would be lost throughout the digital finding process. File headers are particularly significant during a computer forensic investigation because they allow individuals to identify the information of lost files, user activity records, registry keys, and other pertinent evidence.

The difference between these aspects is that the file header is the internal part of how the file is perceived by the device, and the file extension is an external indicator for the user that leads to the file header. For investigations, the file header will be more profitable and reliable as it stores more information that can be useful.

PNG, which stands for Portable Network Graphics, is spelled either as the symbols P-N-G or like the word ping. It is a lossless picture format with bitmapped images. One of the finest features of the PNG format is that it allows for translucent pictures, which is useful in many situations (Hadi, 2016). A website designer, for instance, may wish to include a logo on their webpage that does not obscure the backdrop. Visibility is especially handy for adding images to a web page that must function in both light and dark modes.

JPEG, which stands for Joint Photographic Experts Group, is a digital picture compressing standard that is widely used on the Internet and in digital photography. To
