Switch On Your Brain Dr. Caroline Leaf, 2013-09-01 Over 900,000 copies sold. According to researchers, the vast majority—a whopping 75.98 percent—of the illnesses that plague us today are a direct result of our thought life. What we think about truly affects us both physically and emotionally. In fact, fear alone triggers more than 1,400 known physical and chemical responses in our bodies, activating more than thirty different hormones. Today, our culture is undergoing an epidemic of toxic thoughts that, left unchecked, create ideal conditions for illnesses. Supported by current scientific and medical research, Dr. Caroline Leaf gives readers a prescription for better health and wholeness through correct thinking patterns, declaring that we are not victims of our biology. She shares with readers the switch in our brains that enables us to live happier, healthier, more enjoyable lives where we achieve our goals, maintain our weight, and even become more intelligent. She shows us how to choose life, get our minds under control, and reap the benefits of a detoxed thought life.

Zizek and Law Laurent de Sutter, 2015-03-05 The very first book dedicated to Slavoj Žižek's theoretical treatment of law, this book gathers widely recognized Žižek scholars as well as legal theorists to offer a sustained analysis of the place of law in Žižek's work. Whether it is with reference to symbolic law, psychoanalytical law, religious law, positive law, human rights, to Lacan's, Hegel's, or Kant's philosophies of law, or even to Jewish or Buddhist law, Žižek returns again and again to law. And what his work offers this volume demonstrates is a radically new approach to law and a rethinking of its role within the framework of radical politics. With the help of Žižek himself, who here and for the first time directly engages with the topic of law, this collection provides an authoritative account of Žižek and law. It will be an invaluable resource for researchers and students in the fields of law, legal theory, legal philosophy, political theory, psychoanalysis, theology, and cultural studies.

Handbook of Parent-Implemented Interventions for Very Young Children with Autism Michael Siller, Lindee Morgan, 2018-08-09 This handbook offers practical strategies and evidence-based parent-implemented interventions for very young children with autism spectrum disorder (ASD). It explores this important subject within the context of rapidly increasing numbers of toddlers who are diagnosed with ASD during the second year of life. The handbook discusses how parents of young children with ASD can effectively be supported, taught, and coached to implement evidence-based parenting strategies and intervention techniques and describes a broad range of developmentally appropriate programs at the family, community, and service delivery levels. In addition, the handbook examines individual differences in parenting, cognitions, emotions, and practices and proposes strategies for supporting the varying capacities of diverse families to meet the needs of young children with ASD. Chapters provide diverse coverage spanning cultural, socio-economic differences as well as differences in family structure, parenting, cognitions, emotions, and practices, parental learning styles.

Vivas,Panagiotis D. Bamidis,2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the performance of episodic memory speed of sensory information processing working memory inhibitory function and long term

memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease

Emotional Modulation of the Synapse Christa McIntyre,Jonathan Eric Ploski,2015-08-21 Highly emotional events tend to be well remembered The adaptive value in this is clear those events that have a bearing on survival should be stored for future use as long term memories whereas memories of inconsequential events would not as likely contribute to future survival Enduring changes in the structure and function of synapses neural circuitry and ultimately behavior can be modulated by highly aversive or rewarding experiences In the last decade the convergence of cellular molecular and systems neuroscience has produced new insights into the biological mechanisms that determine whether a memory will be stored for the long term or lost forever This Research Topic brings together leading experts who work at multiple levels of analysis to reveal recent discoveries and concepts regarding the synaptic mechanisms of consolidation and extinction of emotionally arousing memories

Murder in the Courtroom Brigitte Vallabhajosula Ph.D.,2015-01-02 Answers to many legal questions often depend on our understanding of the relationship between the human brain and behavior While there is no evidence to suggest that violence is the sole result of cognitive impairment research does suggest that frontal lobe impairment in particular may contribute to the etiology of violent behavior Murder in the Courtroom presents a comprehensive and detailed analysis of issues most relevant to answering questions regarding the link between cognitive functioning and violence It is the first book to focus exclusively on the etiology and assessment of cognitive impairment in the context of violent behavior and the challenges courts face in determining the reliability of neuroscience evidence provide objective discussions of currently available neuropsychological tests and neuroimaging techniques and their strengths and limitations provide a methodology for the

assessment of cognitive dysfunction in the context of violent behavior that is likely to withstand a Daubert challenge and include detailed discussions of criminal cases to illustrate important points Clinical and forensic psychologists and psychiatrists cognitive neuroscientists and legal professionals will be able to use this book to further their understanding of the relationship between brain function and extreme violence
