

## KINETIC ENERGY

1. Use the following equation to help you complete the questions on this worksheet:

$$\text{Kinetic Energy} = 0.5 \times \text{Mass} \times (\text{speed})^2$$

(J)                      (kg)              (m/s)

- a. A car with a mass of 200kg travels at a speed of 60 m/s.  
Calculate the total kinetic energy of the car. [2 marks]
- b. A train with a mass of 2500kg travels at a speed of 200m/s.  
Calculate the total kinetic energy of the aeroplane. [2 marks]
- c. A man throws a ball with a mass of 5kg and travels at a speed of 15m/s.  
Calculate the total kinetic energy of the ball. [2 marks]
- d. A dog with a mass of 45kg is running through a field at a speed of 30m/s.  
Calculate the total kinetic energy of the dog. [2 marks]
- e. John throw a biscuit at a speed of 10m/s. The biscuit had a mass of 3kg.  
Calculate the total kinetic energy of the biscuit. [2 marks]
- f. A washing contains some t-shirts with a mass of 50kg. The washing is able to spin at 50m/s.  
Calculate the total kinetic energy of the t-shirts inside the washing machine. [2 marks]
- g. Tim flicked a 2kg elastic band from his hand. The band travelled at a speed of 50m/s.  
Calculate the total kinetic energy of the elastic band. [2 marks]
- h. The international space station travels around the Earth at a speed of 7.66km/s. It has a mass of 417,289kg.  
Calculate the total kinetic energy of the elastic band. [3 marks]
- i. The average speed a horse can run at is 44km/s and an average mass of 500000g.  
Calculate the total kinetic energy of an average horse when running. [4 marks]

## **Energy Calculation Practice Answers:**

**Simple Solutions to Energy Calculations** Richard Vaillencourt, 2021-11-29 Updated with new material this book shares the author's secrets for simplifying complex energy calculations and shows you how to use these time saving methods. It shows you how to cut through the maze using innovative decision making tools to determine whether you should invest real time and money for developing details of a project being considered. There is information covered on simplified thermodynamics that gives you a blueprint for controlling the building's energy consumption. Key topics covered include the walk through audit, pumps, fans, VFD, high efficiency motors, insulation, fuel switching, heat recovery, HVAC, air compressor, energy myths and magic. Each chapter has Richard's Retrofit Rules and anecdotal experience in the retrofit. There is a summary of energy calculations given by category plus a discussion of performance guarantees that helps a building manager decide which ESCO can best deliver on their promises of energy savings. **Simple Solutions to Energy**

**Calculations 4th edition** Richard Vaillencourt, 2001 Developed by a practicing engineer this indispensable reference will save you countless hours doing energy feasibility studies and associated calculations. The author will share with you his secrets for simplifying complex energy calculations and show you how to use his unique time saving methods. You'll learn how to cut through the maze of detail using concise innovative decision making tools to determine whether you should invest real time and money into developing the details of a project under consideration. Numerous energy projects involving pumps, fans, motors, HVAC retrofits, insulation and heat recovery are covered with complete calculation details and solutions methodology presented. The third edition adds new material on energy myths associated with energy calculations and conservation.

**Survival Guide to General Chemistry** Patrick E. McMahon, Rosemary McMahon, Bohdan Khomtchouk, 2019-02-13 This work evolved over thirty combined years of teaching general chemistry to a variety of student demographics. The focus is not to recap or review the theoretical concepts well described in the available texts. Instead, the topics and descriptions in this book make available specific detailed step by step methods and procedures for solving the major types of problems in general chemistry. Explanations, instructional process sequences, solved examples and completely solved practice problems are greatly expanded, containing significantly more detail than can usually be devoted to in a comprehensive text. Many chapters also provide alternative viewpoints as an aid to understanding. Key Features: The authors have included every major topic in the first semester of general chemistry and most major topics from the second semester. Each is written in a specific and detailed step by step process for problem solving, whether mathematical or conceptual. Each topic has greatly expanded examples and solved practice problems containing significantly more detail than found in comprehensive texts. Includes a chapter designed to eliminate confusion concerning acid base reactions, which often persists through working with acid base equilibrium. Many chapters provide alternative viewpoints as an aid to understanding. This book addresses a very real need for a large number of incoming freshmen in STEM fields. **Simple Solutions to Energy Calculations: Fourth Edition** Richard

Vaillencourt,2008 Updated with new material on thermodynamics that provides a blueprint on controlling energy use in buildings this reference will save countless hours doing energy feasibility studies and associated calculations The author a practicing engineer will share with you his secrets for simplifying complex energy calculations and show you how to use his unique time saving methods You ll learn how to cut through the maze of detail using concise innovative decision making tools to determine whether you should invest real time and money into developing details of a project under consideration Key topics covered include energy myths and magic the walk through audit lighting pumps fans motors insulation fuel switching heat recovery HVAC and a summary of energy calculations      **Simple Solutions to Energy Calculations, Fifth Edition**

Richard R. Vaillencourt,2020-12-17 Completely revised and updated this fifth edition of a bestseller helps building managers identify what to look for and how to evaluate before making a decision about which guarantee is better for their building and which ESCO can best deliver energy savings This reference will save countless hours doing energy feasibility studies and associated calculations The author a practicing engineer shares his secrets for simplifying complex energy calculations and demonstrates his unique time saving methods      *Free Energy Calculations* Christophe Chipot,Andrew Pohorille,2007-01-08

Free energy constitutes the most important thermodynamic quantity to understand how chemical species recognize each other associate or react Examples of problems in which knowledge of the underlying free energy behaviour is required include conformational equilibria and molecular association partitioning between immiscible liquids receptor drug interaction protein protein and protein DNA association and protein stability This volume sets out to present a coherent and comprehensive account of the concepts that underlie different approaches devised for the determination of free energies The reader will gain the necessary insight into the theoretical and computational foundations of the subject and will be presented with relevant applications from molecular level modelling and simulations of chemical and biological systems Both formally accurate and approximate methods are covered using both classical and quantum mechanical descriptions A central theme of the book is that the wide variety of free energy calculation techniques available today can be understood as different implementations of a few basic principles The book is aimed at a broad readership of graduate students and researchers having a background in chemistry physics engineering and physical biology      U Can: Physics I For Dummies Steven
