What are some differences you have noticed in the size and shape of dogs in your neighborhood?

Do their differences make them better at some things, but not well-suited for others?

What would happen if the world suddenly changed, so the only thing that dogs could eat was deer and there was absolutely no way for a dog to eat if it wasn't big or strong enough to catch and kill a deer?

Most likely, smaller dogs would die off and the bigger ones would survive and reproduce. After a while, instead of a population of dogs of all sizes, most of the dogs in the population would be big dogs.

Describe what is happening in figures 1-3. Is the population of mice different in figure 3 than in figure 1? Explain why.

Evolution and the Common Law Allan C. Hutchinson,2005-04-04 This book offers a radical challenge to accounts of the common law s development Contrary to received jurisprudential wisdom it maintains there is no grand theory which will explain satisfactorily the dynamic interactions of change and stability in the common law s history Offering original readings of Charles Darwin s and Hans Georg Gadamer s works the book shows that law is a rhetorical activity that can only be properly appreciated in its historical and political context tradition and transformation are locked in a mutually reinforcing but thoroughly contingent embrace In contrast to the dewy eyed offerings of much contemporary work it demonstrates that like life law is an organic process i e events are the products of functional and localized causes rather than a miraculous one i e events are the result of some grand plan or intervention In short common law is a perpetual work in progress evanescent dynamic messy productive tantalising and bottom up **Adaptation and Natural Selection** George Christopher

Evolution, Scripture, and Science B. B. Warfield, 2019-09-10

Are naturalistic and Christian creation irreconcilable ideologies In this collection of B B Warfield s writings editors Mark A Noll and David N Livingstone demonstrate that theologians have not always thought so Around the turn of the twentieth century Princeton theologian B B Warfield believed that synthesizing his commitment to the scientific validity of evolution and to the inerrancy of the Bible was an attainable theological task By drawing reasonable distinctions among Darwinism Charles Darwin and evolution he was able to accept the probability of evolution while denying the implications of full blown Darwinism In the realm of inerrancy and evolution Warfield s writings exemplify civil Christian scholarship and shrewd scientific discernment The editors have carefully gleaned Warfield s writings on evolution and inerrancy from theological essays book reviews lectures and historical papers Editorial headnotes introduce the reader to each article s context and content However the editors let Warfield s articles speak for themselves and inform the contemporary dialogue between science and theology Referring to the current debate the editors concur that One way of jolting discussion about science and theology out of the fervent but also intellectually barren stand offs of recent decades is to note one of the best kept secrets in American intellectual history B B Warfield

Concepts of Philosophy Alexander Thomas Ormond, 1906

The Darwinian Tradition in Context Richard G. Delisle, 2017-12-29 The main goal of this book is to put the Darwinian tradition in context by raising questions such as How should it be defined Did it interact with other research programs Were there any research programs that developed largely independently of the Darwinian tradition Accordingly the contributing authors explicitly explore the nature of the relationship between the Darwinian tradition and other research programs running in parallel In the wake of the Synthetic Theory of Evolution which was established throughout the 1930s 1940s and 1950s historians and philosophers of biology devoted considerable attention to the Darwinian tradition i e linking Charles Darwin to mid Twentieth Century developments in evolutionary biology Since then more recent developments in evolutionary biology have challenged in part or entirely the heritage of the Darwinian tradition Not surprisingly this has in turn been followed by a historiographical recalibration on the part of historians and philosophers

regarding other research programs and traditions in evolutionary biology In order to acknowledge this shift the papers in this book have been arranged on the basis of two main threads Part I A perspective that views Darwinism as either being originally pluralistic or having acquired such a pluralistic nature through modifications and borrowings over time Part II A perspective blurring the boundaries between non Darwinian and Darwinian traditions either by contending that Darwinism itself was never quite as Darwinian as previously assumed or that non Darwinian traditions took on board various Darwinian components when not fertilizing Darwinism directly Between a Darwinism reaching out to other research programs and non Darwinian programs reaching out to Darwinism the least that can be said is that this interweaving of intellectual threads blurs the historiographical field This volume aims to open vital new avenues for approaching and reflecting on the development of evolutionary biology
