Landmarking and Segmentation of 3D CT Images Shantanu Banik, Rangaraj Rangayyan, Graham Boag, 2022-06-01 Segmentation and landmarking of computed tomographic CT images of pediatric patients are important and useful in computer aided diagnosis CAD treatment planning and objective analysis of normal as well as pathological regions Identification and segmentation of organs and tissues in the presence of tumors are difficult Automatic segmentation of the primary tumor mass in neuroblastoma could facilitate reproducible and objective analysis of the tumor s tissue composition shape and size However due to the heterogeneous tissue composition of the neuroblastic tumor ranging from low attenuation necrosis to high attenuation calcification segmentation of the tumor mass is a challenging problem In this context methods are described in this book for identification and segmentation of several abdominal and thoracic landmarks to assist in the segmentation of neuroblastic tumors in pediatric CT images Methods to identify and segment automatically the peripheral artifacts and tissues the rib structure the vertebral column the

spinal canal the diaphragm and the pelvic surface are described Techniques are also presented to evaluate quantitatively the results of segmentation of the vertebral column the spinal canal the diaphragm and the pelvic girdle by comparing with the results of independent manual segmentation performed by a radiologist The use of the landmarks and removal of several tissues and organs are shown to assist in limiting the scope of the tumor segmentation process to the abdomen to lead to the reduction of the false positive error and to improve the result of segmentation of neuroblastic tumors Table of Contents Introduction to Medical Image Analysis Image Segmentation Experimental Design and Database Ribs Vertebral Column and Spinal Canal Delineation of the Diaphragm Delineation of the Pelvic Girdle Application of Landmarking Concluding Remarks

Image-guided Radiation Therapy Arno J. Mundt, John C. Roeske, 2010-12-31 Image Guided Radiation Therapy IGRT is a true revolution in the field of radiation oncology IGRT provides the unprecedented means of conforming dose to the shape of the target tissues in 3 dimensions reducing the risk of complications thereby improving the quality of life of irradiated patients Moreover IGRT provides the means to deliver higher than conventional doses thus improving the chance of cure in these patients Despite its established benefits several barriers exist to the widespread clinical implementation of IGRT In the past great concerns existed regarding the large capital outlay needed for both software and hardware This barrier is less relevant today given the increased reimbursements possible with IGRT Today the most significant barrier is education IGRT is a fundamentally new approach to both treatment planning and delivery Adoption of the IGRT approach entails new ways of thinking in regard to patient selection treatment planning and quality assurance measures Unfortunately apart from a few University based short courses limited resources are available for the physician and physicist interested in learning IGRT
