Application of Highway Capacity Manual 2010 Level-of-service Methodologies for Planning Deficiency

Analysis James Oliver Ensley, Tennessee. Department of Transportation, National Research Council (U.S.). Transportation Research Board, 2012 Influence on investment in the infrastructure is critical for decision making by State planning departments Judgments which are made for funding purposes and are based on limited data analysis by states can results in economic disasters for the state and nation The Tennessee Department of Transportation TDOT uses the Evaluation of Roadway Efficiency EVE database to prioritize the importance of roadway projects in the state In addition EVE is also used as a method to provide deficiency analysis results for roadways in the state This study will add support to the methodology of the current decision making process in regards to Tennessee roadways for planning Updating the current deficiency analysis program EVE with the methodologies of the Highway Capacity Manual HCM 2010 is the foundation for improving the decision making abilities of those using EVE for such efforts New algorithms have been developed based upon the procedures in the HCM 2010 for the following sections Freeway Two Lane Highways Multilane Highways and Urban Arterials Using these algorithms and data from Washington County in Tennessee level of service results were analyzed and compared to previous deficiency analysis results Some of these results were found to be better and other were found to be worse than the previous The new method of the HCM 2010 applied in this procedure changed 60% of the level of service ratings based on the comparable data This proves to show the update of the deficiency analysis method currently used will be beneficial in the assistance of the decision making process

Highway capacity manual 2010 National Research Council (U.S.). Transportation Research Board, 2010 The HCM 2010 significantly enhances how engineers and planners assess the traffic and environmental effects of highway projects by Providing an integrated multimodal approach to the analysis and evaluation of urban streets from the points of view of automobile drivers transit passengers bicyclists and pedestrians Addressing the proper application of microsimulation analysis and the evaluation of the results Examining active traffic management in relation to demand and capacity and Exploring specific tools and generalized service volume tables to assist planners in quickly sizing future facilities The four volume format provides information at several levels of detail to help users more easily apply and understand the concepts methodologies and potential applications

Extent of Highway Capacity Manual Use in Planning Richard Gerhard Dowling, Aaron Elias, 2012 TRB's National Cooperative Highway Research Program NCHRP Synthesis 427 Extent of Highway Capacity Manual Use in Planning assesses how state departments of transportation small and large metropolitan planning organizations and local governments are using or might use the Highway Capacity Manual for planning analyses or more specifically for performance monitoring problem identification project prioritization programming and decision making processes
