Natural Experiments Of History:

Natural Experiments of History Jared Diamond, James A. Robinson, 2010 Some central questions in the natural and social sciences can't be answered by controlled laboratory experiments often considered to be the hallmark of the scientific method. This impossibility holds for any science concerned with the past. In addition, many manipulative experiments, while possible, would be considered immoral or illegal. One has to devise other methods of observing, describing, and explaining the world. In the historical disciplines, a fruitful approach has been to use natural experiments or the comparative method. This book consists of eight comparative studies drawn from history, archaeology, economics, economic history, geography, and political science. The studies cover a spectrum of approaches ranging from a non-quantitative narrative style in the early chapters to quantitative statistical analyses in the later chapters. The studies range from a simple two-way comparison of Haiti and the Dominican Republic, which share the island of Hispaniola, to comparisons of 81 Pacific islands and 233 areas of India. The societies discussed are contemporary ones, literate societies of recent centuries, and non-literate past societies. Geographically, they include the United States, Mexico, Brazil, western Europe, tropical Africa, India, Siberia, Australia, New Zealand, and other Pacific islands. In an Afterword, the editors discuss how to cope with methodological problems common to these and other natural experiments of history.

Quicklet on Natural Experiments of History edited by Jared Diamond and James A. Robinson Nicole Silvester, 2012-05-15 Natural Experiments in History grew in a way out of co-editor Jared Diamond's book *Guns, Germs, and Steel: The Fates of Human Societies*. In the earlier book, he spent a chapter looking at the Polynesian expansion as a near-perfect natural experiment in which a single ancestral Polynesian culture migrated to hundreds of islands in the Pacific Ocean, each with its own different geographic features. Because the culture that settled the islands was the same, any differences that developed between separate island societies could be largely attributed to the geography of the individual islands. At the conclusion of *Guns, Germs, and Steel*, Diamond noted that there were many other such natural experiments in history just waiting to be studied, and he called for historians to pick up where he left off and see what else could be learned. Of course, scholars have been using such natural experiments for a long time, especially in other disciplines like archaeology and anthropology, but they have not been as popular in historical scholarship. With *Natural Experiments of History*, the editors and authors hope to illustrate how natural experiments can be used to bring the rigours of the hard sciences to historical scholarship, both in descriptive and statistics-based studies.

Guns, Germs, and Steel Jared M. Diamond, 1997 In this artful, informative, and delightful book, New York Review of Books Diamond offers a convincing explanation of the way the modern world came to be and stunningly dismantles

across subfields are able to scour history for useful identifying variation development and growth economists are able to trace the historical roots of contemporary outcomes Differences in fields suggest differences in scholars aims of studying historical natural experiments We propose a taxonomy of three primary motives that reflect priorities in different fields historians aim to understand causal processes within specific settings Economists across fields aim to identify clean historical events in whatever context to test hypotheses of theoretical interest or estimate causal parameters And growth and development economists aim to identify past variation that can be causally linked to contemporary outcomes of interest We summarize important contributions made by research in each category Finally we close with a brief discussion of challenges facing each category of work

Nature, Experiment, and the Sciences Trevor H. Levere,W.R. Shea,2012-12-06 This collection of essays is a tribute to Stillman Drake by some of his friends and colleagues and by others on whom his work has had a formative influence It is difficult to know him without succumbing to his combination of discipline and enthusiasm even in fields remote from Renaissance physics and natural philosophy and so he should not be surprised in this volume to see emphases and methods congenial to him even on topics as remote as Darwin or the chemical revolution Therein lies whatever unity the discerning reader may find in this book beyond the natural focus and coherence of the largest section on Galileo and the final section on Drake s collection of books a major and now accessible resource for research in the field that he has made his own We have chosen as the occasion for presenting the volume to Stillman Drake Galileo s birthday Galileo has had more than one birthday party in Toronto since Drake came to the University of Toronto As for the title it reflects a shared conviction that experiment is the key to science it is what scientists do Drake has already asserted that emphasis in the title of his magisterial Galileo at Work and we echo it here Those who have had the privilege and pleasure of working and arguing with Stillman over the years know his tenacity penetration and vigour They also know his generosity and humility We owe him much
