QUICK-CHECK questions

- 1 **Identify, giving an example, which is more variable: your external environment or the internal environment of your cells.**
The external environment is far more variable than the internal environment. For example, the external temperature can vary over time, with extremely hot weather on one day and very cold conditions the next. In contrast, the internal environment of cells, such as the tissue fluid and the plasma that bathe cells, is normally maintained within narrow limits and so is very stable in a healthy person.
- 2 **List the essential difference between an intra- and an extracellular fluid.**
An intracellular fluid is the cytosol that is contained within the cell membrane and surrounds the nucleus. An extracellular fluid is the tissue fluid and the plasma that is outside cells and bathes their outer membranes.
- 3 **Identify each of the following as intracellular or extracellular:**
 - a **plasma**
Plasma is extracellular because it exists outside cells.
 - b **cytosol**
Cytosol is intracellular because it is contained within cells.
 - c **tissue fluid.**
Tissue fluid is extracellular because it exists outside cells.
- 4 **List up to three substances that can move between the internal fluid compartments of the body.**
The internal fluid compartment of the body comprises tissue fluid, blood plasma and cytosol (see figure 5.4). Many substances can move between these internal fluid compartments including:
 - hormones that are transferred in the blood plasma and then move into the cytosol of target cells
 - glucose (and other nutrients) that can move from the plasma into the cytosol
 - waste products, such as carbon dioxide, that pass from cells into the blood for transport to an excretory organ, such as the lungs for carbon dioxide.
- 5 **Define the term 'homeostasis' using words suitable for a non-biology student.**
'Homeostasis' is the term used to describe the events that take place in the body to counteract a change that has occurred so that the conditions within the body are kept within a narrow range. For example, if too much of a particular hormone (a chemical) is produced within the body, events occur that cause a reduction in the production of that hormone.

Nature in Asian Traditions of Thought J. Baird Callicott, Roger T. Ames, 1989-04-21 Here Western environmental philosophers and some of our most distinguished representatives of Asian and comparative philosophy critically consider what Asia has to offer The first section provides an ecological world view as a basis for comparison Subsequent sections include chapters by leading contemporary scholars in Chinese Japanese Indian and Buddhist thought that explore the Western perception of Asian traditions the perception that Asian philosophy is a rich conceptual resource for contemporary environmental thinkers

The Nature of Time J. Woods Halley, 2022-12-02 This book reviews and contrasts contemporary and historical perceptions of time from scientific and intuitive human points of view Ancient and modern clocks Augustinian ideas the deterministic Newtonian universe biological clocks deep time thermodynamics quantum mechanics and relativity all contribute to the perspective The focus is on what can be inferred from established technologies and science as opposed to futuristic speculation Chapter 1 describes clocks including the cesium atomic clocks establishing the current global time standard a history of clock development biological clocks phylogenetic trees radioactive dating and astronomical methods to determine the age of the universe Chapter 2 poses ancient questions about time not fully addressed

by an understanding of the technical nature of clocks An early summary of some of these questions as described by Augustine in the 3rd century CE is followed by a description of how Newton 1300 years later introduced a conception of time which provided some answers such as the nature of an infinitesimally short present Implications concerning the reality of events in the past present and future are also discussed The Newtonian picture is contrasted with the intuitive human one and the possibilities of time travel and temporal recurrence are briefly discussed Chapter 3 introduces the second law of thermodynamics and addresses how it is compatible with a time reversible Newtonian description of a universe even though it appears to define an arrow of time The nature of entropy and its relation to coarse graining and emergence play a central role in the discussion Chapter 4 discusses ways in which quantum mechanics has altered the Newtonian perspective accounting for various interpretations of the meaning of quantum mechanics with regard to time Chapter 5 describes basic elements of special relativity and their implications for the nature of time Examples of time dilation and the changing order of space such as separated events in different frames are described The examples are chosen to avoid evocation of currently unattainable technologies An afterword in chapter 6 reviews questions raised by Augustine and summarizes how the development of science since then has addressed them This book was originally developed for an interdisciplinary seminar for beginning undergraduates at the University of Minnesota It uses a small amount of algebra mainly in supplementary appendices and does not assume any prior knowledge of physics chemistry biology or astronomy In contrast to many semipopular books on time it avoids speculation either about engineering techno optimism or physical theory strings loop quantum gravity black hole entropy Instead it takes a more grounded approach and describes what is currently known and not known to help both students and the general reader make better sense of time

Deeper Than Darwin John Haught,2018-05-04 In his acclaimed book God After Darwin John Haught argued that religious belief is wholly compatible with evolutionary biology Now in Deeper Than Darwin he advances his argument further by saying that religious belief is even more revealing about life than Darwinism Haught looks hard at the question of how after Darwin religions may plausibly claim to be bearers of truth and not just of meaning and adaptive consolation While he assumes the fundamental correctness of evolutionary biology he firmly rejects the non scientific belief that evolutionary biology amounts to an adequate explanation of living phenomena Even though Darwinism is illuminating Haught argues it by no means tells us everything we need to know about life even in principle To find the deepest though certainly not the clearest understandings of life and the universe we may still profitably consult the religions of the world Deeper Than Darwin takes up where God After Darwin left off arguing that Darwin s vision is important and essentially correct but that we can still dig deeper in our understanding of what is going on in the life story **Untangling Complex Systems** Pier Luigi Gentili,2018-09-03 Complex Systems are natural systems that science is unable to describe exhaustively Examples of

Complex Systems are both unicellular and multicellular living beings human brains human immune systems ecosystems human societies the global economy the climate and geology of our planet This book is an account of a marvelous interdisciplinary journey the author made to understand properties of the Complex Systems He has undertaken his trip equipped with the fundamental principles of physical chemistry in particular the Second Law of Thermodynamics that describes the spontaneous evolution of our universe and the tools of Non linear dynamics By dealing with many disciplines in particular chemistry biology physics economy and philosophy the author demonstrates that Complex Systems are intertwined networks working in out of equilibrium conditions which exhibit emergent properties such as self organization phenomena and chaotic behaviors in time and space

Mortal Minds Gerald M. Woerlee, 2010-06-03 With its easy to read and personal style this book provides some intriguing new explanations of the physiology of death and the dying experience Susan Blackmore PhD Author of *Dying to Live* Dying is the last conscious experience undergone by each person But what do the dying experience In the last few decades a good deal of publicity has surrounded people who have been close to death and then reported intense experiences that seem to suggest a supernatural existence beyond death Does the conscious mind somehow continue to exist after the body has passed away *Mortal Minds* answers these questions Dr G M Woerlee explains how the normal functioning of the human body near death can generate beliefs in the reality of the supernatural and life after death An anesthesiologist with more than twenty years of hospital experience Dr Woerlee has been struck over the years by the similarities between the body's symptoms under anesthesia and its reactions near death Among the issues he addresses are the sensations of being disembodied that those near death often describe the perception that mind and body are separate components of existence whether there is such a thing as a soul the physical effects of decreased oxygen to the brain and the visions that the dying sometimes report from rapturous experiences of eternal peace to diabolical dreams While not dismissing near death experiences as mere hallucinations Dr Woerlee is also careful to point out that even powerful psychological impressions by themselves do not constitute scientific proof of life after death Taking this balanced objective stance he succeeds in conveying a better understanding of the dying process and helping us all to realize the nature of these final experiences G M Woerlee Leiden The Netherlands is an anesthesiologist affiliated with the Rijnland Hospital in Leiderdorp The Netherlands and the author of two books on anesthesiology
