QUICK-CHECK questions

- 1 **What kinds of haemoglobins are normally found in the red blood cells of people after birth?**
Within a year after birth, the major haemoglobin found in a person's red blood cells is haemoglobin A (approximately 98 per cent) with a smaller amount of haemoglobin A2 (approximately 2 per cent).
- 2 **What kinds of protein chains make up haemoglobin A?**
Two kinds of protein chains make up haemoglobin A, namely alpha chains and beta chains. Each haemoglobin A molecule is composed of two alpha chains and two beta chains and each of these four protein chains has an associated haem group. (Haem groups are iron-containing molecules that play a key role in binding oxygen.)
- 3 **What role does Desferal® play in the treatment of thalassaemia?**
In beta-thalassaemia, the red blood cells die more rapidly than normal, resulting in anaemia. The haemoglobin from these red blood cells breaks down and iron from the haem portion of the haemoglobin accumulates in abnormal amounts in the body organs. The drug Desferal® is a chemical agent that binds to this excess iron preventing its deposition within the body and allowing it to be excreted.
- 4 **Where does transcription occur? What is the end product of this process?**
The process of gene transcription occurs within the nucleus of a cell. The end product of transcription is messenger RNA (mRNA).
- 5 **A template strand of DNA includes the base sequence:**
... T A T C G G C A T ...
Write the base sequence of the complementary strand.
The base sequence in the complementary strand is:
... A T A G C C G T A ...
- 6 **A strand of mRNA includes the base sequence:**
... A U G U A U C C G ...
Write the base sequence of the DNA template.
The DNA template strand that produced this mRNA includes the complementary sequence:
... T A C A T A G G C ...
- 7 **List two ways in which RNA differs from DNA.**
Differences between DNA and RNA include:
 - 1 DNA is typically a double-stranded molecule, whereas RNA is single stranded.
 - 2 DNA contains the sugar deoxyribose, whereas the sugar present in RNA is ribose.
 - 3 The nucleotide bases in DNA are A (adenine), T (thymine), C (cytosine) and G (guanine), whereas the nucleotide bases in RNA are A, U (uracil), C and G.

YinYang Bipolar Relativity: A Unifying Theory of Nature, Agents and Causality with Applications in Quantum Computing, Cognitive Informatics and Life Sciences Zhang, Wen-Ran, 2011-03-31 YinYang bipolar relativity can trace its philosophical origins to ancient Chinese YinYang cosmology which claims that everything has two sides or two opposite but reciprocal poles or energies More specifically this discipline is intended to be a logical unification of general relativity and quantum mechanics YinYang Bipolar Relativity A Unifying Theory of Nature Agents and Causality with Applications in Quantum Computing Cognitive Informatics and Life Sciences presents real world applications of YinYang bipolar relativity that focus on quantum computing and agent interaction This unique work makes complex theoretical topics such as the ubiquitous effects of quantum entanglement logically comprehensible to a vast audience The Nature of Time J. Woods Halley, 2022-12-02 This book reviews and contrasts contemporary and historical perceptions of time from scientific and intuitive human points of view Ancient and modern clocks Augustinian ideas the deterministic Newtonian universe biological clocks deep time thermodynamics quantum mechanics and relativity all contribute to the perspective The focus is on what can be inferred from established technologies and science as opposed to futuristic speculation Chapter 1 describes clocks including the cesium atomic clocks establishing the current global time standard a history of clock development biological clocks phylogenetic trees radioactive dating and astronomical methods to determine the age of the universe Chapter 2 poses ancient questions about time not fully addressed by an understanding of the technical nature of clocks An early summary of some of these questions as described by Augustine in the 3rd century CE is followed by a description of how Newton 1300 years later introduced a conception of time which provided some answers such as the nature of an infinitesimally short present Implications concerning the reality of events in the past present and future are also discussed The Newtonian picture is contrasted with the intuitive human one and the possibilities of time travel and temporal recurrence are briefly discussed Chapter 3 introduces the second law of thermodynamics and addresses how it is compatible with a time reversible Newtonian description of a universe even though it appears to define an arrow of time The nature of entropy and its relation to coarse graining and emergence play a central role in the discussion Chapter 4 discusses ways in which quantum mechanics has altered the Newtonian perspective accounting for various interpretations of the meaning of quantum mechanics with regard to time Chapter 5 describes basic elements of special relativity and their implications for the nature of time Examples of time dilation and the changing order of space such as separated events in different frames are described The examples are chosen to avoid evocation of currently unattainable technologies An afterword in chapter 6 reviews questions raised by Augustine and summarizes how the development of science since then has addressed them This book was originally developed for an interdisciplinary seminar for beginning undergraduates at the University of Minnesota It uses a small amount of algebra mainly in supplementary appendices and does not assume any prior knowledge of physics chemistry

biology or astronomy In contrast to many semipopular books on time it avoids speculation either about engineering techno optimism or physical theory strings loop quantum gravity black hole entropy Instead it takes a more grounded approach and describes what is currently known and not known to help both students and the general reader make better sense of time

XML for Bioinformatics Ethan Cerami, 2006-06-02 Introduction The goal of this book is to introduce XML to a bioinformatics audience It does so by introducing the fundamentals of XML Document Type Definitions DTDs XML Namespaces XML Schema and XML parsing and illustrating these concepts with specific bioinformatics case studies The book does not assume any previous knowledge of XML and is geared toward those who want a solid introduction to fundamental XML concepts The book is divided into nine chapters Chapter 1 Introduction to XML for Bioinformatics This chapter provides an introduction to XML and describes the use of XML in biological data exchange A bird's eye view of our first case study the Distributed Annotation System DAS is provided and we examine a sample DAS XML document The chapter concludes with a discussion of the pros and cons of using XML in bioinformatic applications Chapter 2 Fundamentals of XML and BSML This chapter introduces the fundamental concepts of XML and the Bioinformatic Sequence Markup Language BSML We explore

the origins of XML define basic rules for XML document structure and introduce XML namespaces We also explore several sample BSMML documents and visualize these documents in the TM Rescentris Genomic Workspace Viewer
