PHYSICS

Paper-II

(Molecular Physics, Nuclear Physics and Solid State Physics)

Time—Three Hours]

[Maximum Marks—40

Note :- (1) All questions are compulsory.

(2) Draw well labelled diagrams wherever necessary.

EITHER

1. (A) (i) What are different kinds of molecular spectra ? Why do molecules show band spectra rather than line spectra ? 2
- (ii) Obtain an expression for rotational energy levels of a diatomic molecule. State the selection rule. 4
- (iii) Calculate the frequency of the spectral line corresponding to an energy change of 0.005 eV. 2

OR

1. (B) (i) Discuss Gamow's theory of alpha decay and obtain the expression for transmission probability. 6
- (ii) Hence, derive the Geiger-Nuttal rule. 2

Final Physics Paper2 2006 Memo:

2006 Physics Education Research Conference Laura McCullough, Paula Heron, Leon Hsu, 2007-03-05 Syracuse New York
26 27 July 2006 *Unclear Physics* Målfrið Braut-Hegghammer, 2016-08 Many authoritarian leaders want nuclear weapons but few manage to acquire them Autocrats seeking nuclear weapons fail in different ways and to varying degrees Iraq almost managed it Libya did not come close In *Unclear Physics* M lfrid Braut Hegghammer compares the two failed nuclear weapons programs showing that state capacity played a crucial role in the trajectory and outcomes of both projects Braut Hegghammer draws on a rich set of new primary sources collected during years of research in archives fieldwork across the Middle East and interviews with scientists and decision makers from both states She gained access to documents and individuals that no other researcher has been able to consult Her book tells the story of the Iraqi and Libyan programs from their origins in the late 1950s and 1960s until their dismantling This book reveals contemporary perspectives from scientists and regime officials on the opportunities and challenges facing each project Many of the findings challenge the conventional wisdom about clandestine weapons programs in closed authoritarian states and their prospects of success or failure Braut Hegghammer suggests that scholars and analysts ought to pay closer attention to how state capacity affects nuclear weapons programs in other authoritarian regimes both in terms of questioning the actual control these leaders have over their nuclear weapons programs and the capability of their scientists to solve complex technical challenges **Macromolecular Chemistry and Physics** ,2006 **Treatise on Geophysics, Volume 10** Tilman Spohn, 2010-05-20 Planets and Moons covers topics relating to the physics of the major planetary bodies in the solar system starting with an introductory description of the solar system and collection of pertinent data continuing with a discussion of the early history of the planets and finishing with articles about planet dynamics thermal evolution of planets and satellites and descriptions of their magnetic fields and the processes that generate them In addition to providing a review on the solid planets and the satellites this volume addresses the interactions of solid surfaces and atmospheres as well as the roles of water and ice in shaping the surfaces of planetary bodies Self contained volume starts with an overview of the subject then explores each topic with in depth detail Extensive reference lists and cross references with other volumes to facilitate further research Full color figures and tables support the text and aid in understanding Content suited for both the expert and non expert **Numerical Techniques for Global Atmospheric Models** Peter H. Lauritzen, Christiane Jablonowski, Mark A. Taylor, Ramachandran D. Nair, 2011-03-29 This book surveys recent developments in numerical techniques for global atmospheric models It is based upon a collection of lectures prepared by leading experts in the field The chapters reveal the multitude of steps that determine the global atmospheric model design They encompass the choice of the equation set computational grids on the sphere horizontal and vertical discretizations time integration methods filtering and diffusion mechanisms conservation properties tracer transport and considerations for designing models for massively parallel computers A reader interested in

applied numerical methods but also the many facets of atmospheric modeling should find this book of particular relevance

Pedestrian and Evacuation Dynamics 2008 Wolfram W. F. Klingsch, Christian Rogsch, Andreas Schadschneider, Michael Schreckenberg, 2010-03-11 The international conference on Pedestrian and Evacuation Dynamics held on February 27-29 2008 at Wuppertal University in Germany was the fourth in this series after successful meetings in Duisburg 2001, Greenwich 2003 and Vienna 2005. The conference was aimed at improving the scientific exchange between scientists, experts and practitioners of various fields of pedestrian and evacuation dynamics and featured the analysis of evacuation processes and pedestrian motion modeling of pedestrian dynamics in various situations, experiments on pedestrian dynamics, human behavior research, regulatory action. All these topics are included in this book to give a broad and state-of-the-art overview of pedestrian and evacuation dynamics. **Making a Difference: Volume I and II** Sasha A. Barab, Kenneth E. Hay, Nancy Butler Songer, Daniel T. Hickey, 2017-09-05 William Wordsworth 1770-1850 needs little introduction as the central figure in Romantic poetry and a crucial influence in the development of poetry generally. This broad-ranging survey redefines the variety of his writing by showing how it incorporates contemporary concepts of language, difference and the ways in which popular and serious literature were compared and distinguished during this period. It discusses many of Wordsworth's later poems, comparing his work with that of his regional contemporaries as well as major writers such as Scott. The key theme of relationship both between characters within poems and between poet and reader is explored through Wordsworth's construction of community and his use of power relationships. A serious discussion of the place of sexual feeling in his writing is also included. *Soil Survey of ... [various Counties, Etc.]*, 1966 Evolutionary Foundations of Economic Science Yuji Aruka, 2014-10-04 This book aims to discern and distinguish the essential features of basic economic theories and compare them with new theories that have arisen in recent years. The book focuses on seminal economic ideas and theories developed mainly in the 1930s to 1950s because their emergence eventually led to new branches of economics. The book describes an alternative analytical framework spreading through the interdisciplinary fields of socioeconophysics and sociodynamics. The focus is on a set of branching or critical points that separate what has gone before from what has followed. W. Brian Arthur used the term redomaining when he referred to technological innovation. In the present volume the author aims to re-domain economic theories suited for a new social order. Major technological innovations accompany not only changes in the economy and the market but changes in their meaning as well. In particular the evolution of trading technology has changed the meaning of the invisible hand. At the end of the last century the advent of socioeconophysics became a decisive factor in the emergence of a new economic science. This emergence has coincided with changes in the implications of the economy and the market which consequently require a redomaining of economic science. In this new enterprise the joint efforts of many scientists outside traditional economics have brought brilliant achievements such as power law distribution and network analysis among others. However the more diverse the backgrounds of economic scientists the less integrated the common

views among them may be resulting in a sometimes perplexing potpourri of economic terminology This book helps to mitigate those differences shedding light on current alternative economic theories and how they have evolved Near-boundary Fluid Mechanics Shu-Qing Yang, 2025-03-07 Near Boundary Fluid Mechanics focuses on the near boundary region and its significance It delves into topics like boundary shear stress drag reduction using polymer additives turbulence sources secondary currents log law validity sediment transport and more Unlike similar books it emphasizes the importance of the near boundary region This book is organized into chapters covering internal flows external flows loose boundary flows and density currents It extends Prandtl s fundamental concept to internal flows showing how potential flow theory can describe flow without a solid boundary In addition the book provides a theoretical analysis of boundary shear stress in three dimensional flows and explores the turbulent structures in drag reduction flows A key feature is clarifying the role of wall normal velocity in mass moment and energy transfer Additionally Archimedes principle is covered to explain pressure drag and establishes a relationship between wake volume and hydrodynamic force Presents a specific focus on the near boundary region and its significance Explores historically pivotal challenges within fluid mechanics and their impacts Offers a straightforward yet effective solution to numerous enduring questions in the field Introduces fluid acceleration and clearly distinguishes its effects
