Introduction: Teeth and the bones around the mouth give a great deal of information about both a species' diet and how it eats. Take a look at the skull features below.

Question: How do the mouths of hominids compare?

1. **Measure:** As shown at right, place one of the protractor's circles on the top of the zygomatic process. Place the vertex of the protractor at the top of the nasal opening (Hint: You may have to look at the **Front view** in order to see where the top of the nasal opening is in relation to the **orbit**). Place the other circle on the edge of the **maxilla**. The resulting angle is the **maxillary angle**. Complete the table. (Note: You will not be able to do this measurement on incomplete skulls.)

lifestyle Human Paleobiology Robert B. Eckhardt, 2000-09-28 Human Paleobiology provides a unifying framework for the study of human populations both past and present to a range of changing environments. It integrates evidence from studies of human adaptability, comparative primatology, and molecular genetics to document consistent measures of genetic distance between subspecies, species, and other taxonomic groupings. These findings support the interpretation of the biology of humans in terms of a smaller number of populations characterised by higher levels of genetic continuity than previously hypothesised. Using this as a basis, Robert Eckhardt then goes on to analyse problems in human paleobiology, including phenotypic differentiation, patterns of species range expansion, and phyletic succession, in terms of the patterns and processes still observable in extant populations. This book will be a challenging and stimulating read for students and researchers interested in human paleobiology or evolutionary anthropology.
