

19.1. The hydrogeologic cross section on the figure illustrates the pattern of ground-water flow along a local flow system. Assume that the source of contamination develops with advection as the only

operative transport process. Describe the pathway for contaminant migration and estimate at what time in the future the plume will reach the stream.

19.2. Ground water flows through the left face of a cube of sandstone (1 m on a side) and out of the right face with a linear ground-water velocity of 10^{-5} m/s . The porosity of the sandstone is 0.10, and the effective diffusion coefficient is $10^{-10} \text{ m}^2/\text{s}$. Assume that a tracer has concentrations of 120, 100, and 80 mg/l (1.2, 1.0, and $0.8 \times 10^5 \text{ mg/m}^3$) at the inflow face, the middle of the block, and the outflow face, respectively. Calculate the mass flux through the central plane due to advection and diffusion.

19.3. A contaminant is added as a point source to ground water flowing with a constant velocity of $4 \times 10^{-6} \text{ m/s}$. Assuming longitudinal and two transverse dispersivities (y- and z-directions) of 1.0, 0.1, and 0.01 m, determine the spatial standard deviations ($\sigma_{x,y,z}$) in the plume size after 400 m of transport.

19.4. A series of hydraulic-conductivity measurements for an unconfined aquifer provide a mean hydraulic conductivity ($\bar{Y}$) of 0.004 m/s, where $Y = \ln K$, a variance in the log-transformed hydraulic conductivity (σ_Y^2) of 1.0, and a correlation length in the direction of the mean flow (σ_L) of 10.0 m. Estimate the asymptotic macroscale dispersivity for the aquifer.

19.5. In Figure 19.19, look at the pattern of evolution in the Br^- concentration as a function of travel distance. Assume that at 237 days, Γ_L is equal to 24 m. Calculate the dispersion coefficient and the dispersivity for the aquifer.

Principles of Contaminant Hydrogeology Second Edition demonstrates how to solve a client's site contamination problem while maximizing cost effectiveness. It focuses on small and medium sized firms for which speed, accuracy and cost are all crucial factors in the site assessment and closure process. Based on real world problems, the book takes you step by step through the investigation and includes client consultant regulator interaction, budgets, ethics and data extrapolation for solving problems. It introduces concepts such as field logistics, drilling techniques, sampling protocols, contaminant movement and remediation. Regulatory personnel, hydrogeological consultants, drilling contractors, remediation contractors, university instructors and students will benefit from the wealth of information provided in this new edition. **Hydrology** Ian

Watson, 2017-11-13 Hydrology covers the fundamentals of hydrology and hydrogeology taking an environmental slant dictated by the emphasis in recent times for the remediation of contaminated aquifers and surface water bodies as well as a demand for new designs that impose the least negative impact on the natural environment. Major topics covered include hydrological principles, groundwater flow, groundwater contamination and clean up, groundwater applications to civil engineering, well hydraulics and surface water. Additional topics addressed include flood analysis, flood control and both ground water and surface water applications to civil engineering design. **Hydrologic Time Series Analysis** Deepesh Machiwal, Madan Kumar Jha, 2012-03-05 There is a dearth of relevant books dealing with both theory and application of time series analysis techniques, particularly in the field of water resources engineering. Therefore many hydrologists and hydrogeologists face difficulties in adopting time series analysis as one of the tools for their research. This book fills this gap by providing a proper blend of theoretical and practical aspects of time series analysis. It deals with a comprehensive overview of time series characteristics in hydrology, water resources engineering, various tools and techniques for analyzing time series data, theoretical details of 31 available statistical tests along with detailed procedures for applying them to real world time series data, theory and methodology of stochastic modelling and current status of time series analysis in hydrological sciences. In addition, it demonstrates the application of most time series tests through a case study as well as presents a comparative performance evaluation of various time series tests together with four invited case studies from India and abroad. This book will not only serve as a textbook for the students and teachers in water resources engineering but will also serve as the most comprehensive reference to educate researchers/scientists about the theory and practice of time series analysis in hydrological sciences. This book will be very useful to the students, researchers, teachers and professionals involved in water resources, hydrology, ecology, climate change, earth science and environmental studies. Field

Hydrologic Frequency Modeling V.P. Singh, 2012-12-06 Floods constitute a persistent and serious problem throughout the United States and many other parts of the world They are responsible for losses amounting to billions of dollars and scores of deaths annually Virtually all parts of the nation coastal mountainous and rural are affected by them Two aspects of the problem of flooding that have long been topics of scientific inquiry are flood frequency and risk analyses Many new even improved techniques have recently been developed for performing these analyses Nevertheless actual experience points out that the frequency of say a 100 year flood in lieu of being encountered on the average once in one hundred years may be as little as once in 25 years It is therefore appropriate to pause and ask where we are where we are going and where we ought to be going with regard to the technology of flood frequency and risk analyses One way to address these questions is to provide a forum where people from all quarters of the world can assemble discuss and share their experience and expertise pertaining to flood frequency and risk analyses This is what constituted the motivation for organizing the International Symposium on Flood Frequency and Risk Analyses held May 14 17 1986 at Louisiana State University Baton Rouge Louisiana
