Viktor Larsson, 2017-08-17 This thesis deals with control aspects of complex hydromechanical transmissions The overall purpose is to increase the knowledge of important aspects to consider during the development of hydromechanical transmissions to ensure transmission functionality These include ways of evaluating control strategies in early design stages as well as dynamic properties and control aspects of displacement controllers which are key components in these systems Fuel prices and environmental concerns are factors that drive research on propulsion in heavy construction machinery Hydromechanical transmissions are strong competitors to conventional torque converter transmissions used in this application today They offer high efficiency and wide speed torque conversion ranges and may easily be converted to hybrids that allow further fuel savings through energy recuperation One challenge with hydromechanical transmissions is that they offer many different configurations which in turn makes it important to enable evaluation of control aspects in early design stages In this thesis hardware in the loop simulations which blend hardware tests and standard software based simulations are considered to be a suitable method A multiple mode transmission applied to a mid sized construction machine is modelled and evaluated in offline simulations as well as in hardware in the loop simulations Hydromechanical transmissions rely on efficient variable pumps motors with fast accurate displacement controllers This thesis studies the dynamic behaviour of the displacement controller in swash plate axial piston pumps motors A novel control approach in which the displacement is measured with an external sensor is proposed Performance and limitations of the approach are tested in simulations and in experiments The experiments showed a significantly improved performance with a controller that is slightly more advanced than a standard proportional controller The implementation of the controller allows simple tuning and good predictability of the displacement response *Poor's Manual of Industrials* ,1918 **The Chemical News and Journal of Physical Science** ,1913 **The Chemical News and Journal of Industrial Science** ,1913 Integrated Computer-Aided Design of Mechanical Systems Shaker A. Meguid, 2012-12-06 In this book the author has presented an introduction to the practical application of some of the essential technical topics related to computer aided engineering CAE These topics include interactive computer graphics ICG computer aided design CAD computer and computer integrated manufacturing CIM aided

analysis CAA Unlike the few texts available the present work attempts to bring all these seemingly specialised topics together and to demonstrate their integration in the design process through practical applications to real engineering problems and case studies This book is the result of the author s research and teaching activities for several years of postgraduate and undergraduate courses in mechanical design of rotating machinery computer aided engineering of finite elements solid mechanics engineering practical applications and properties of materials at Cranfield Institute of dynamics Technology Oxford Engineering Science and the University of Manchester Institute of Science and Technology UMIST It was soon realised that no books on the most powerful and versatile tools available to engineering designers existed To satisfy this developing need this book on the use of computers to aid the design process and to integrate design analysis and manufacture was prepared
