Fundamentals of Modern Manufacturing Mikell P. Groover, 2021 *Fundamentals of Modern Manufacturing Materials Processes and Systems* is designed for a first course or two course sequence in manufacturing at the junior or senior level in mechanical industrial and manufacturing engineering curricula. The distinctive and modern approach of the book emerges from its balanced coverage of the basic engineering materials, the inclusion of recent manufacturing processes and comprehensive coverage of electronics manufacturing technologies. The quantitative focus of the text is displayed in its emphasis on manufacturing science, greater use of mathematical models and end of chapter problems. This International Adaptation of the book offers revised and expanded coverage of topics and new sections on contemporary materials and processes. The new and updated examples and practice problems help students gain solid foundational knowledge and the edition has been completely updated to use SI units. Manufacturing Zainul Huda, 2018-05-11. This unique book is equally useful to both engineering degree students and production engineers practicing in industry. The volume is designed to cover three aspects of manufacturing technology: a fundamental concepts, b engineering analysis, mathematical modeling of manufacturing operations and c 250 problems and their solutions. These attractive features render this book suitable for recommendation as a textbook for undergraduate as well as Master level programs in Mechanical Materials Industrial Engineering. There are 19 chapters in the book; each chapter first introduces readers to the technological importance of chapter topic and definitions of terms and their explanation and then the mathematical modeling, engineering analysis of the corresponding manufacturing operation is presented. The meanings of the terms along with their SI units in each mathematical model are clearly stated. There are over 320 mathematical models, equations. The book is divided into three parts. Part One introduces readers to manufacturing and basic manufacturing processes: metal casting, plastic molding, metal forming, ceramic processing, composite processing, heat treatment, surface finishing, welding, joining and powder metallurgy and their engineering analysis, mathematical modeling followed by worked examples, solved problem. Part Two covers non traditional machining and computer aided manufacturing including their mathematical modeling and the related solved problems. Finally, quality control (QC) and economic aspects of manufacturing are discussed in Part Three. Features: Presents over 320 mathematical models and 250 worked examples. Covers both conventional and non traditional manufacturing. Includes design problems and their solutions on engineering manufacturing processes. Special emphasis on casting design and weld design in manufacturing. Offers computer aided manufacturing, quality control and economics of manufacturing.
