**Mobile Security Products for Android** Philipp Kratzer, Christoph Gruber, Andreas Clementi, David Lahee, Philippe Rödlach, Peter Stelzhammer, 2014-10-14 We have once again tested security products for smartphones running Google s Android operating system Our report covers details of the products made by leading manufacturers Smartphones represent the future of modern communications In 2013 more than 1 billion smartphones were sold a further milestone in the advance of these devices<sup>1</sup> A study published by Facebook emphasises the importance of smartphones in our lives about 80% of users make use of their smartphone within 15 minutes of waking up each day At the same time the traditional function of a telephone is becoming less and less important The high quality of integrated cameras means that the smartphone is increasingly used for photography As well as with photos users trust their devices with their most personal communications such as Facebook WhatsApp and email This brings some risks with it as such usage makes the smartphone interesting for criminals who attempt to infect the device with malware or steal personal data There is also the danger brought by phishing attacks These days the use of security software on a PC or laptop is seen as essential However many smartphone users do not yet have the same sense of responsibility even though their devices store personal data private photos Internet banking information or even company data As modern smartphones are often expensive to buy they are also an attractive target for thieves Top quality smartphones cost several hundred Euros As it is not possible to physically prevent them from being stolen they must be made less attractive to thieves Consequently many of today s security products contain not only malware protection but also highly developed theft protection functions which make the device less attractive to thieves e g by locking the device and help the owner to find it again

*Me and My Cell Phone* Crystal Powell, 2012-04-24 Cell phones and the Internet have been the recipients of in depth research on their increased and rapid integration into everyday life and the innovative

appropriations associated with them in many societies The cell phone has attracted particular attention in its perceived abilities to both enhance and destruct social relationships Our increased access to social media and to the cell phone has taken social networking to an unprecedented level These communication technologies are revered by many as great all purpose all positive communication devices in spite of their flaws They are overwhelmingly bestowed with agency and superiority Too often they are idolized with little regard to how they affect and are affected by their users on a personal level The mutual shaping between technology and society is not adequately acknowledged Technologies in spite of the seemingly endless possibilities offered by their many functions can quite literally be sterile and useless objects outside of conscious and tangible human effort Cell phones and the Internet though undoubtedly capable of providing myriad beneficial opportunities for their users need at long last to be put in their place This book is a contribution in that regard Kindled by her own intimate history with her cell phone and a growing curiosity about ICTs in general this book is a culmination of Crystal Powells thoughts reactions to and interpretations of some of the literature on these technologies The book draws on and critically reviews contributions by some leading authors on the social shaping of ICTs and social media to offer a more nuanced and complex understanding of technology in relation to those who use and are used by it
