 Zhu, 2010-02-17 Ad hoc networks refer to the wireless networking paradigm that covers a variety of network forms for
 specific purposes such as mobile ad hoc networks sensor networks vehicular networks underwater networks underground
 networks personal area networks and home networks The various forms of ad hoc networks promise a broad scope of
 applications in civilian commercial and military areas which have led to significant new research problems and challenges
 and have attracted great efforts from academia industry and government This unique networking paradigm necessitates re
 examination of many established wireless networking concepts and protocols and calls for developing new fundamental
 understanding of problems such as interference mobility connectivity capacity and security among others While it is essential to
 advance theoretical research on fundamentals and practical research on efficient algorithms and protocols it is also critical to
 develop useful applications experimental prototypes and real world deployments to achieve a practical impact on our society for
 the success of this networking paradigm The annual International Conference on Ad Hoc Networks AdHocNets is a new
 event that aims at providing a forum to bring together researchers from academia as well as practitioners from industry and
 government to meet and exchange ideas and recent research work on all aspects of ad hoc networks As the first edition of
 this event AdHocNets 2009 was successfully held in Niagara Falls Ontario Canada during September 22 25 2009
