*Mechanical Engineer's Reference Book* A. Parrish, 2014-05-19 Mechanical Engineer's Reference Book 11th Edition presents a comprehensive examination of the use of the International System of Units (SI) metrication. It discusses the effectiveness of such a system when used in the field of engineering. It addresses the basic concepts involved in thermodynamics and heat transfer. Some of the topics covered in the book are the metallurgy of iron and steel, screw threads and fasteners, hole basis and shaft basis fits, an introduction to geometrical tolerancing, mechanical working of steel, high strength alloy steels, advantages of making components as castings, and basic theories of material properties. The definitions and classifications of refractories are fully covered. An in-depth account of the mechanical properties of non-ferrous materials is provided. Different fabrication techniques are completely presented. A chapter is devoted to the description of tubes for water gas sanitation and heating services. Another section focuses on the accountant's measure of productivity. The book can provide useful information to engineers, metallurgists, students, and researchers.

*Process Control for Sheet-Metal Stamping* Yongseob Lim, Ravinder Venugopal, A. Galip Ulsoy, 2013-12-12 Process Control for Sheet Metal Stamping presents a comprehensive and structured approach to the design and implementation of controllers for the sheet metal stamping process. The use of process control for sheet metal stamping greatly reduces defects in deep drawn parts and can also yield large material savings from reduced scrap. Sheet metal forming is a complex process and is most often characterized by partial differential equations that are numerically solved using finite element techniques. In this book, twenty years of academic research are reviewed, and the resulting technology is transitioned to the industrial environment. The sheet metal stamping process is modeled in a manner suitable for multiple input multiple output control system design with commercially available sensors and actuators. These models are then used to design adaptive controllers, and real-time controller implementation is discussed. Finally, experimental results from actual shop floor deployment are presented, along with ideas for further improvement of the technology. Process Control for Sheet Metal Stamping allows the reader to design and implement process controllers in a typical manufacturing environment by retrofitting standard hydraulic or mechanical stamping presses, and as such will be of interest to practising engineers working in metal working, automotive, and aeronautical industries. Academic researchers studying improvements in process control and how these affect

the industries in which they are applied will also find the text of value
