SME Mineral Processing and Extractive Metallurgy Handbook Courtney A. Young, 2019-02-01 This landmark publication distills the body of knowledge that characterizes mineral processing and extractive metallurgy as disciplinary fields. It will inspire and inform current and future generations of minerals and metallurgy professionals. Mineral processing and extractive metallurgy are atypical disciplines requiring a combination of knowledge, experience, and art. Investing in this trove of valuable information is a must for all those involved in the industry: students, engineers, mill managers, and operators. More than 192 internationally recognized experts have contributed to the handbook's 128 thought-provoking chapters that examine nearly every aspect of mineral processing and extractive metallurgy. This inclusive reference addresses the magnitude of traditional industry topics and also addresses the new technologies and important cultural and social issues that are important today.

**Contents:** Mineral Characterization and Analysis, Management and Reporting, Comminution, Classification and Washing, Transport and Storage, Physical Separations, Flotation, Solid and Liquid Separation, Disposal, Hydrometallurgy, Pyrometallurgy, Processing of Selected Metals, Minerals and Materials.

*Physical Metallurgy of High Manganese Steels* Wolfgang Bleck, Christian Haase, 2019-12-06 The Special Issue *Physical Metallurgy of High Manganese Steels* addresses the highly fascinating class of manganese alloyed steels with manganese contents well above 3 mass%. The book gathers manuscripts from internationally recognized researchers with stimulating new ideas and original results. It consists of fifteen original research papers. Seven contributions focus on steels with manganese contents above 12 mass%. These contributions cover fundamental aspects of process-microstructure-properties relationships with processes ranging from cold and warm rolling over deep rolling to heat treatment. Novel findings regarding the fatigue and fracture behavior, deformation mechanisms, and computer-aided design are presented. Additionally, the Special Issue also reflects the current trend of reduced Mn content (3–12 mass%) in advanced high strength steels (AHSS). Eight contributions were dedicated to these alloys, which are often referred to as 3rd generation AHSS, medium manganese steels, or quenching and partitioning (Q-P) steels. The interplay between advanced processing, mainly novel annealing variants, and microstructure evolution has been addressed using computational and experimental approaches. A deeper understanding of strain rate sensitivity, hydrogen embrittlement, phase transformations, and the consequences for the materials properties has been developed. Hence, the topics included are manifold, fundamental, science-oriented, and at the same time relevant to industrial application.
