Name/Period:

*This is the start of how to prepare. Be sure to use your notebook and the class webpage to help you prepare for the test.*

**Water Cycle:** Identify the parts of the water cycle by writing the following terms near the appropriate arrow: **Evaporation**, **Condensation**, **Precipitation**, and **Run off**

Explain what happens at each of the following stages in the water cycle. Be sure to explain changes in energy and states of matter.

1. **Evaporation:** Water is heated ---by solar radiation. Liquid water is gaining energy, which changes it from liquid as to a gas (vapor). The less dense water vapor rises in the atmosphere (troposphere).

2. **Condensation:** Water vapor (gas) cools; loses energy and slows down; loses so much energy that it changes from a gas back to a liquid. The liquid clings to solid particles.

Like the making dew lab-the air became saturated and reached the dew point

3. **Precipitation:** water droplets or ice crystals that have grown heavy enough to fall through the air back to the ground.

Can be in solid or liquid form, depending on the temp of the atmo.
