like other ecosystems This book describes the development of a priority zone map for reforestation measures showing where reforestation might have the greatest social and ecological benefits To achieve this a problem analysis of a case study region is conducted and thematic reforestation benefits are determined Using remote sensing and GIS the areas where benefits can be obtained are mapped in individual layers and compiled into a summarizing priority zone map It is thus possible to identify areas where reforestation would achieve multiple benefits The concept of priority maps could be used to facilitate reforestation strategies by local communities and municipal governments and could thus contribute to initiate an integrated forest and landscape restoration of the Bolivian montane dry forests      **Nuclear Science Abstracts** ,1974      **Registry of**
