English Learning in the Digital Age Shuang Zeng, 2018-11-23 Moving beyond the Web 2.0 and digital native rhetoric this book addresses the complex experiences of learners of English as a foreign language EFL in a world embedded with interactive and participatory technologies Adopting a sociocultural perspective it investigates EFL learners' behaviours concerning digital technology and guides exploration into their contextually mediated choices and learning practices in the 2.0 era The argument is developed on the basis of the findings of a mixed sequential study that focused on 1485 Chinese undergraduates use and non use of

online tools and applications outside the English classroom Particular attention is paid to the role of context and agency when understanding their learning choices and behaviours in the context of digital technology In particular the book acknowledges the explanatory power of agency in the minority instances of good practices among these EFL learners At the same time it demonstrates that for most learners use of the current web is limited and mostly non interactive The barriers to 2 0 transfer are largely contextual and the so called communicative opportunities and participatory culture in particular did not fit into the learners sociocultural context of language learning Overall the compelling argument proposes that the technology facilitated changes in EFL practices are a bottom up process that is taking place in day to day situations and constrained by the learning context within which the learner is situated Based on these arguments the book provides a framework that challenges the existing beliefs about language learning with online technology and that contributes to our understanding of how context mediates EFL learners behaviours surrounding digital technologies It is a valuable resource for teachers researchers and policy makers providing them with insights into using digital technology to stimulate good learning practices outside the classroom
