

## Solving Equations

Writing & solving equations can help us answer questions about situations.

Suppose a scientist has 13.68 liters of acid and needs 16.05 liters for an experiment. How many more liters of acid does she need for the experiment?

We can represent this situation with the equation:

$$13.68 + x = 16.05$$

The solution can be found by subtracting 13.68 from each side. This gives us some new equations that also represent the situation:

$$x = 16.05 - 13.68$$

$$x = 2.37$$

The solution is 2.37 liters.

Let's say a food pantry takes a 54-pound bag of rice and splits it into portions that each weigh  $\frac{3}{4}$  of a pound. How many portions can they make from this bag?

We can represent this situation with the equation:

$$\frac{3}{4}x = 54$$

We can find the value of  $x$  by dividing each side by  $\frac{3}{4}$ . This gives us some new equations that represent the same situation:

$$x = 54 \div \frac{3}{4}$$

$$x = 72$$

The solution is 72 portions.
