The Physics of Multiply and Highly Charged Ions F.J. Currell, 2013-03-14 It is arguable that most of chemistry and a large portion of atomic physics is concerned with the behaviour of the 92 naturally occurring elements in each of 3 charge states 1 0 1 276 distinct species The world of multiply and highly charged ions provides a further 4186 species for us to study Over 15 times as many It is the nature of human beings to explore the

unknown This nature is particularly strong in physicists although this may not be readily apparent because these explorations are undertaken in somewhat abstract spaces It is then no surprise that we have begun to explore the realm of multiply and highly charged ions Over the past few decades a consistently high quality body of work has emerged as the fruits of this exploration This internationally based subject pursued in universities and research laboratories worldwide has expanded beyond its roots in atomic physics We now see it embracing elements of surface science nuclear physics and plasma physics as well as drawing on a wide range of technologies This speciality offers new tests of some of our most fundamental ideas in physics and simultaneously new medical cures new ways of fabricating electronic gadgets a major hope for clean sustainable energy and explanations for astrophysical phenomena It is both a deeply fundamental and a widely applicable area of investigation
