Higher Order Components For Grid Programming Making Grids More Usable:

Higher-Order Components for Grid Programming Jan Dünneweber, Sergei Gorlatch, 2009-06-24 A major challenge in grid computing remains the application software development for this new kind of infrastructure Grid application programmers have to take into account several complicated aspects distribution of data and computations parallel computations on different sites and processors heterogeneity of the involved computers load balancing etc Grid programmers thus demand novel programming methodologies that abstract over such technical details while preserving the beneficial features of modern grid middleware For this purpose the authors introduce Higher Order Components HOCs HOCs implement generic parallel distributed processing patterns together with the required middleware support and they are offered to users via a high level service interface Users only have to provide the application specific pieces of their programs as parameters while low level implementation details such as the transfer of data across the grid are handled by the HOCs HOCs were developed within the CoreGRID European Network of Excellence and have become an optional extension of the popular Globus middleware The book provides the reader with hands on experience describing a broad collection of example applications from various fields of science and engineering including biology physics etc The Java code for these examples is provided online complementing the book The expected application performance is studied and reported for extensive performance experiments on different testbeds including grids with worldwide distribution The book is targeted at graduate students advanced professionals and researchers in both academia and industry Readers can raise their level of knowledge about methodologies for programming contemporary parallel and distributed systems and furthermore they can gain practical experience in using distributed software Practical examples show how the complementary online material can easily be adopted in various new projects

G. Hey,2003-04-18 Grid computing is applying the resources of many computers in a network to a single problem at the same time Grid computing appears to be a promising trend for three reasons 1 Its ability to make more cost effective use of a given amount of computer resources 2 As a way to solve problems that can t be approached without an enormous amount of computing power 3 Because it suggests that the resources of many computers can be cooperatively and perhaps synergistically harnessed and managed as a collaboration toward a common objective A number of corporations professional groups university consortiums and other groups have developed or are developing frameworks and software for managing grid computing projects The European Community EU is sponsoring a project for a grid for high energy physics earth observation and biology applications In the United States the National Technology Grid is prototyping a computational grid for infrastructure and an access grid for people Sun Microsystems offers Grid Engine software Described as a distributed resource management tool Grid Engine allows engineers at companies like Sony and Synopsys to pool the computer cycles on up to 80 workstations at a time the Grid is a very hot topic generating broad interest from research and industry e g IBM Platform Avaki Entropia Sun HP Grid architecture enables very popular e Science projects like the Genome project which demand global interaction and networking In recent surveys over 50% of Chief Information Officers are expected to use Grid technology this year Grid Computing Features contributions from the major players in the field Covers all aspects of grid technology from motivation to applications Provides an extensive state of the art guide in grid computing This is essential reading for researchers in Computing and Engineering physicists statisticians engineers and mathematicians and IT policy makers [Power Systems Resilience](#) Naser Mahdavi Tabatabaei,Sajad Najafi Ravadanegh,Nicu Bizon,2018-08-16 This book presents intuitive explanations of the principles and applications of power system resiliency as well as a number of straightforward and practical methods for the impact analysis of risk events on power system operations It also describes the challenges of modelling distribution networks optimal scheduling multi stage planning deliberate attacks cyber physical systems and SCADA based smart grids and how to overcome these challenges Further it highlights the resiliency issues using various methods including strengthening the system against high impact events with low frequency and the fast recovery of the system properties A large number of specialists have collaborated to provide innovative solutions and research in power

systems resiliency They discuss the fundamentals and contemporary materials of power systems resiliency theoretical and practical issues as well as current issues and methods for controlling the risk attacks and other threats to AC power systems The book includes theoretical research significant results case studies and practical implementation processes to offer insights into electric power and engineering and energy systems Showing how systems should respond in case of malicious attacks and helping readers to decide on the best approaches this book is essential reading for electrical engineers researchers and specialists The book is also useful as a reference for undergraduate and graduate students studying the resiliency and reliability of power systems

Agent-Based Technologies and Applications for Enterprise Interoperability Klaus Fischer, Jörg Müller, James J. Odell, 2009-04-30 The ATOP Agent Based Technologies and Applications for Enterprise Interoperability workshop series focuses on technologies that support interoperability in networked organizations on successful applications of these technologies and on lessons learned So far two ATOP workshops have been held at the AAMAS conferences in Utrecht The Netherlands in July 2005 and in Estoril Portugal in May 2008 The 13 papers presented here are extended versions of carefully reviewed and selected contributions to the workshops The topics covered are business interoperability organizations and virtual institutions modeling multiagent systems agent interaction and security The main goal was to collect approaches for the application of agent technologies in these areas Current trends in the development of agent technologies are compared with recent developments in service oriented and model driven system design with respect to their ability to solve interoperability problems
