Carl Haywood,David Tzuriel,2013-11-11 The terms interactive and dynamic would never have been associated with psychological and psychoeducational assessment a generation ago They have currency now because of widespread dissatisfaction with the normative standardized testing model criticism of theoretical concepts of intelligence recognition of abuses of standardized intelligence testing and frustration with prediction and classification as primary goals of assessment It is almost certainly true that public policy concerns propel scientific activity far more often than science propels public policy In the case of psychological assessment public policy concerns have arisen in the last 20 years primarily around issues of possible discrimination against members of ethnic minorities At the same time there has been a resurgence of dedication to excellence in education goals These concerns have led to such extreme measures as prohibition of the use of standardized intelligence tests to determine school placement decisions

especially for minority children They have led also to a search for alternatives to standardized normative testing The chapters in this volume represent a variety of answers to this need

Designing Interaction and Interfaces for Automated Vehicles
Neville Stanton, Kirsten M. A. Revell, Patrick Langdon, 2021-03-10

Driving automation and autonomy are already upon us and the problems that were predicted twenty years ago are beginning to appear These problems include shortfalls in expected benefits equipment unreliability driver skill fade and error inducing equipment designs

Designing Interaction and Interfaces for Automated Vehicles User Centred Ecological Design and Testing investigates the difficult problem of how to interface drivers with automated vehicles by offering an inclusive human centred design process that focusses on human variability and capability in interaction with interfaces This book introduces a novel method that combines both systems thinking and inclusive user centred design It models driver interaction provides design specifications concept designs and the results of studies in simulators on the test track and in road going vehicles This book is for designers of systems interfaces interactions UX Human Factors and Ergonomics researchers and practitioners involved with systems engineering and automotive academics

In this book Prof Stanton and colleagues show how Human Factors methods can be applied to the tricky problem of interfacing human drivers with vehicle automation They have developed an approach to designing the human automation interaction for the handovers between the driver and the vehicle This approach has been tested in driving simulators and most interestingly in real vehicles on British motorways The approach called User Centred Ecological Interface Design has been validated against driver behaviour and used to support their ongoing work on vehicle automation I highly recommend this book for anyone interested or involved in designing human automation interaction in vehicles and beyond
