The three controllers achieve closed-loop H_2 norms of 0.04, 0.07 and 0.03, respectively. Computed closed-loop modes and compare the gains from road disturbance to y_1, y_2, y_3 for the passive and active systems. It is clear that all three controllers reduce suspension deflection and body acceleration below the set points.

So far you have designed \hat{X}_n controllers that meet the performance objectives for the nominal value (nominal) system. This model is only an approximation of the true situation and you need to make sure performance is maintained in the face of model errors and uncertainties. This is called robust performance. Next you will synthesize design μ controllers that achieve robust performance for the entire family of μ system controllers (synthesized with the design function using the structured model errors) $\{ \hat{X}_n \}$ or “worst-case” performance ($\mu = 0.1$).

Willems, 2012-12-06 This book contains the text of the plenary lectures and the mini courses of the European Control Conference ECC 93 held in Groningen, the Netherlands, June 25-July 1, 1993. However, the book is not your usual conference proceedings. Instead, the authors took this occasion to take a broad overview of the field of control and discuss its development both from a theoretical as well as from an engineering perspective. The first essay is by the key note speaker of the conference, A.G.J. MacFarlane. It consists of a non-technical discussion of information processing and knowledge acquisition as the key features of control engineering technology. The next six articles are accounts of the plenary addresses. The contribution by R.W. Brockett concerns a mathematical framework for modelling motion control, a central question in robotics and vision. In the paper by M. Morari, the engineering and the economic relevance of chemical process control are considered in particular, statistical quality control and the control of systems with constraints. The article by A.C.P.M. Backx is written from an industrial perspective. The author is director of an engineering consulting firm involved in the design of industrial control equipment. Specifically, the possibility of obtaining high performance and reliable controllers by modelling identification and optimizing industrial processes is discussed. **Using MATLAB, SIMULINK and Control System**

Toolbox Alberto Cavallo, Roberto Setola, Francesco Vasca, 1996 MATLAB is an easy-to-use tool that integrates numerical computation with scientific visualization. This book shows how to use this high-level language to perform complex algebraic manipulations, advanced 2D and 3D graphics, and the simulation of linear and nonlinear dynamic systems. Covers the use and practice of MATLAB, the simulation of dynamic systems via SIMULINK, the analysis and design of control systems using the Control System Toolbox, and the manipulation of the Handle Graphics Object for the design of an advanced Graphic User Interface (GUI).
