city's operations that is required to respond to the citizens' needs in a timely manner and use the city resources wisely IBM Intelligent Operations Center delivers a unified view of city agencies providing three primary elements for successful management of cities: use information, anticipate problems, and coordinate actions and resources Chapter 1 of this IBM Redbooks publication introduces the IBM Intelligent Operations Center solution The chapter provides a high level overview of its features, benefits, and architecture This information is intended for city officials and IT architects that must understand the business value of IBM Intelligent Operations Center and its architecture The remaining chapters of this book focus on information that help IBM Intelligent Operations Center administrators perform daily administration tasks This book describes commands and tools that IBM Intelligent Operations Center administrators must use to keep the solution running, troubleshoot and diagnose problems, and perform preventive maintenance This book includes preferred practices, tips, and techniques, and general suggestions for administrators of IBM Intelligent Operations Center on-premises deployments For related information about this topic, refer to the following IBM Redbooks publications: IBM Intelligent Operations Center for Smarter Cities Redpaper REDP 4939 IBM Intelligent Operations Center for Smarter Cities Solution Guide *Process Based Unification for Multi-model Software Process Improvement* Z.D. Kelemen, 2013-01-30 Many different quality approaches are available in the software industry Some of the approaches such as ISO 9001 are not software specific, i.e. they define general requirements for an organization and they can be used at any company Others such as Automotive SPICE have been derived from a software specific approach and can be used for improving specific in this case automotive processes Some are created to improve development processes, e.g. CMMI for Development, others focus on services, e.g. CMMI for Services, and again others are related to particular processes such as software testing, e.g. TMMi, or resource management, e.g. People CMM A number of differences among quality approaches exist and there can be various situations in which the usage of multiple approaches is required, e.g. to strengthen a particular process with multiple quality approaches or to reach certification of the compliance to a number of standards First of all, it has to be decided which approaches have potential for the organization In many cases, one approach does not contain enough information for process implementation Consequently, the organization may need to use several approaches and the decision has to be made how the chosen approaches can be used simultaneously This area is called Multi-model Software Process Improvement (MSPI) The simultaneous usage of multiple quality approaches is called the multi-model problem In this dissertation, we propose a solution for the multi-model problem which we call the Process Based Unification (PBU) framework The PBU framework consists of the PBU concept, a PBU process, and the PBU result We call PBU concept the mapping of quality approaches to a unified process The PBU concept is operationalized by a PBU process The PBU result includes the resulting unified process and the mapping of quality approaches to the unified process Accordingly, we addressed the following research question: Does the PBU framework provide a solution? **BIM Handbook** Rafael Sacks, Charles Eastman, Ghahg Lee, Paul Teicholz, 2018-07-03 Discover BIM: A better way to build better
