FANUC Digital Twin concept

A digital twin is the concept of creating a digital replica of your physical machines, production processes or shop floor layout in order to generate a number of competitive advantages.

- **Factor proof of concept:** you can test the system to confirm the theoretical logic
- **Design part programs faster:** programmers can test G-code without taking a machine out of production
- **Immersion and skills training:** no need to take the machine offline
- **Virtual commissioning:** your machine tool stays in operation, minimising downtime
- **Better customer support:** before a FANUC technician arrives, our remote customer support team can diagnose the problem
- **Digitalisation of the machine shop:** with FANUC Digital Twin you can provide end-to-end digitalisation from CAM to control, optimising process flow

Need to improve your daily or weekly output? Let FANUC CNC technology provide you with that much-needed boost.

FANUC CNC GUIDE, Surface Estimation and AI Servo Monitor

Part of the FANUC Digital Twin concept, you can use CNC Guide to reproduce CNC behaviour and leverage the surface estimation function to maximise part finish prior to cutting. You can also take advantage of AI Servo Monitoring to analyse and evaluate spindle data.

- Visualise the effect of CNC functions with CNC position command
- Get an exact cycle time estimate before actual cutting
- Measure servo position data during air cutting with Servo Wizard
- Estimate and visualise component surface finish prior to actual cutting
- Enjoy efficient service by remote maintenance

FANUC MT-LINK

This PC software platform is able to collect, manage and analyse data from FANUC and non-FANUC controlled equipment and devices. With MT-LINK you can access the production status of the entire factory floor at a glance, in real time.

- Feeds production data over a secure network into a single centralised point, meaning it can be analysed remotely from your production office
- Contributes to making the machine tool ready
- Easy to set-up, no special hardware required
- Accessible via any PC or internet-enabled device within your factory network
- A single system can monitor from 1 to 100 machines
- Allows you to monitor operational results on an individual machine basis
- Diagnostic capabilities help you to identify bottlenecks

RAUSA,2021-02-18 The purpose of this book is to explain the Fanuc turning canned cycles through a new didactic concept In different manuals it is easy to find contrasting descriptions regarding the Fanuc turning canned cycles Some manuals present the G74 function as an axial drilling cycle and others present it as a grooving cycle along the Z axis The G75 function is also described in some texts as a radial grooving cycle while in others it is defined as a radial drilling cycle It should be added that the G75 function is also able to perform a facing cut with chip breaking The book aims to explain the Fanuc turning cycles in a definite way by adopting a new didactic method that is not limited to the simple description of cycle parameters but includes all the machining operations that each cycle is able to perform CNC Programming Handbook

Machines S. K. Sinha,2015-05-05 Do you know how to insert a part of a program into another program at the desired location Background editing Using PCMCIA card Or maybe a simple task such as replacing G02 by G03 in the whole file When it comes to manual program entry on the machine or searching deleting editing copying moving inserting an existing program residing in the control memory or the PCMCIA card most people resort to trial and error method While they might be able to accomplish what they desire the right approach would save a lot of their precious time If this is exactly what you want this book is for you The information contained herein is concise yet complete and exhaustive The best part is that you can enjoy the convenience of having the wealth of useful information on editing techniques even on your smart phone which is always with you You would often need to refer to it because it is not possible to memorize all the steps which are many a time too complex and devoid of common logic so as to make the correct guess The following excerpt from the book would give an idea of the methodical and step by step approach adopted in the book Writing a file on the memory card The following operation will save program number 1234 in the memory card with the name TESTPRO Select the EDIT mode on the MOP panel Press the PROG key on the MDI panel Press the next menu soft key Press the soft key CARD Press the soft key OPRT Press the soft key PUNCH Type 1234 and press the soft key O SET Type TESTPROG and press the soft key F NAME Press the soft key EXEC While the file is being copied on the memory card the character string OUTPUT blinks at the lower right corner of the screen Copying may take several seconds depending on the size of the file being copied If a file with file name TESTPROG already exists in the memory card it may be overwritten unconditionally or a message confirming the

overwriting may be displayed depending on a parameter setting In case of such a warning message press the EXEC soft key to overwrite and CAN soft key to cancel writing However system information such as PMC ladder is always overwritten unconditionally The copied file is automatically assigned the highest existing file number plus one The comment if any with the O word i e in the first block of the program will be displayed in the COMMENT column of the card directory To write all programs type 9999 as the program number In this case if file name is not specified all the programs are saved in file name PROGRAM ALL on the memory card A file name can have up to 8 characters and an extension up to 3 characters XXXXXXXX XXX Repeat the last three steps to copy more files Finally press the CAN soft key to cancel the copying mode and go to the previous menu
