Adoption of agricultural innovations by smallholder farmers in the context of HIV/AIDS Faith N. Nguthi,2023-08-28 Using tissue cultured technology is a potentially important way for smallholder banana farmers to improve their yields and income In the situation of the impoverishing effects of high HIV AIDS prevalence in a rural banana farming community this applies even more The research documented in this book examines the balance between required

inputs and potential benefits of applying the tissue cultured technology among HIV AIDS affected and non affected households in Maragua district Central Kenya using a livelihood approach The results show that adoption of the technology and its continued use differs according to the resources endowment of the farming households Lack of financial and physical capital notably a water tank inhibits adoption irrespective of HIV AIDS status However households headed by elderly females dominate among the poor households and the HIV AIDS affected households This illustrates how HIV AIDS interfaces with poverty and thereby indirectly with the feasibility of sustainable technology adoption The research also shows that livelihood decisions and strategies of farming households are influenced by land tenure status having title deeds or not and labour constraints at the household level The latter arise as a consequence of HIV AIDS related morbidity and mortality
