

RAT DISSECTION GUIDE

Follow this guide and use the photos to assist you in dissecting the rat. See the final page of this guide for a checklist of structures required to identify.

EXTERNAL STRUCTURES

1. Examine the rat specimen and note the basic body plan and external features. The rat's body is divided into the anterior head connected to the trunk by a short neck and a posterior tail. Rats use all four limbs for locomotion and therefore have similar anatomical features on all limbs. Each digit has a claw at the tip and walking pads in the palm area. One of the distinguishing mammalian features of the rat is the hair covering most of the body. While male and female rats have paired mammary glands, they are not visible in male rats.
2. Note the cone-shaped head with elongated face. On the head find the **eyes** and **ears**. The eyes have upper and lower eyelids and a nictitating membrane, found on the medial portion of the eye beneath the two outer lids. Observe the external ear skin fold of each ear called the pinna, which aids in directing sound waves to the external ear opening. Locate the long sensory hairs, called **vibrissae** (whiskers), on the head which provide the rat with a very effective sense of touch (Figure 1).

New Therapies to Prevent or Cure Auditory Disorders Sylvie Pucheu, Kelly E. Radziwon, Richard Salvi, 2020-03-25 Hearing loss is the most common form of sensory impairment in humans affecting 360 million persons worldwide In parallel tinnitus disorder the perception of a phantom sound often described as a ringing or buzzing affects around 10 15% of the general population and interferes with daily life Hyperacusis defined as a hypersensitivity to moderate intensity sounds often co occurs with tinnitus suggesting a common mechanism of dysfunction for these two perceptual disorders Whereas some drug candidates are in the process of being developed nowadays no effective treatment exists to cure hearing loss and tinnitus The topic of this book was selected with the goal of emphasizing mechanisms that induce hearing loss and tinnitus which lead the selection of promising targets for hearing disorder treatment Hair cells HC are the sensory cells of the inner ear required for both auditory and vestibular functions in all vertebrates HC are progressively lost during ageing and they are in addition sensitive to physical and acoustic traumas infectious diseases and chemicals present in commonly used treatments such as anticancer antimalarial or antibiotics As adult mammals including humans cannot regenerate dead HC all the possible injury could result in irreversible and permanent hearing loss It has been shown however that a limited capacity to regenerate HC exists in mouse at an early stage of development The regenerative capacity of HC then appears simply repressed in adult mammals and one could expect it will be possible to re activate it with an appropriate therapeutic approach which is still to be defined Immune mediated inner ear disease has been introduced and accepted as one SNHL pathophysiology it responds to immunosuppressive therapy and is one of the few reversible forms of bilateral SNHL Macrophages are always present in the spiral ligament of the lateral wall and are activated in response to various types of stimuli including noise exposure ischemia mitochondrial damage and surgical stress Recent studies have also revealed another type of immune cell called perivascular melanocyte like macrophages PVM Ms in the stria vascularis The book will include a review of inflammatory immune cells in the cochlear lateral wall the pathways involved in cochlear damage and their potential as therapeutic targets The final chapter provides an overview of current animal model of tinnitus and hyperacusis Nowadays no effective treatment exists to cure tinnitus and hyperacusis One major obstacle to arises from the fact that tinnitus is a subjective phenomenon the only possible diagnosis relies on self reports of the subjects The main constraint of the use of animal models is the subjective character of tinnitus This chapter describe the advancement in animal models which play an important role in

Internal Anatomy Of A Rat Worksheet Answers: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous compelling novels captivating the hearts of readers worldwide. Lets delve into the realm of top-selling books, exploring the engaging narratives that have charmed audiences this year. Internal Anatomy Of A Rat Worksheet Answers : Colleen Hoover "It Ends with Us" This heartfelt tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids absorbing storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Discover the Magic : Delia Owens "Where the Crawdads Sing" This evocative coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These top-selling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of engaging stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and thrilling novel that will keep you wondering until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
