Normal operation of the GIL can be determined by comparing the diagnostic test¹ and displaying GIL 1.07.02, CQ2475. Read the number of counts when the engine is not running, but the ignition is ON. The count reading should be near 275. Turn the engine and observe the counts. In normal operation, the count should be 700-750. Increase the level of drag when the engine starts, and if there the count is reduced to other parts of the diagnostic test.

NOTE Independent connections to both of battery-driven power and ground connections are shown. This and other electronic control codes.
