

MILLING- INTRODUCTION:

Milling is the machine operation in which the removal of metal from the work piece takes place due to a rotating cutting tool (cutter) when the work is fed past it. The cutter has multiple cutting edges and rotates at a very fast rate. The rotating cutting tool known as the "Milling Cutter" is a multiple point tool having the shape of a solid revolution with cutting teeth arranged either on the periphery or on end or on both. The revolving cutter is held on a spindle or arbor and the work piece is clamped or bolted on the machine table or may be in a vise or a three jaw chuck or an index head held or a rotary table etc. The milling process is employed for producing flat contoured or helical surfaces, for making helical grooves, to cut teeth and toothed gears.

WORKING PRINCIPLE OF MILLING:

Below figure illustrates the working principle employed in metal removing operation on a milling machine. The job or work piece is rigidly clamped on the table of the machine or in a chuck or an index head and revolving multitooth cutter is mounted either on a spindle or an arbor. The job is fed slowly past the cutter. The work can be fed in a vertical, longitudinal or cross direction. With the movement of the work piece, the cutter teeth remove metal from the job in the form of chips to produce the desired shape.

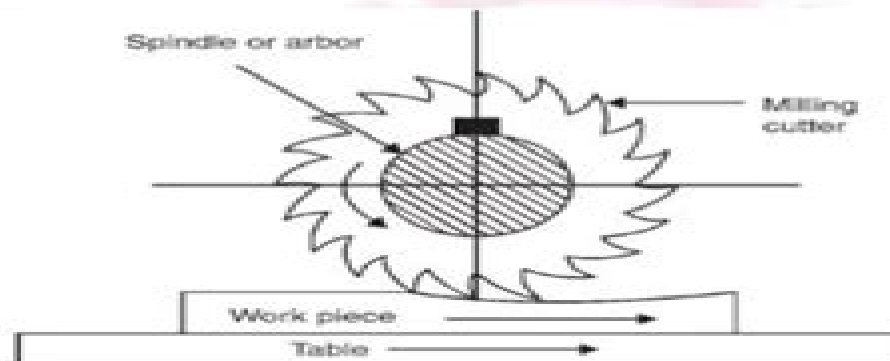

Fig.: Working Principle of Milling Machine

MILLING METHODS:

There are two distinct methods of milling classified as follows:

1. **Up-milling or conventional milling:** In the up-milling or conventional milling, the metal is removed in form of small chips by a cutter rotating against the direction of travel of the work piece.
2. **Down milling or climb milling:** Down milling is also known as climb milling. In this method, the metal is removed by a cutter rotating in the same direction of feed of the work piece.

This book presents select proceedings of International Conference on Mechanical Engineering Researches and Evolutionary Challenges ICMech REC 23. It covers the latest research in the areas of mechanical engineering and materials applications. Various topics covered in this book are materials, composite, nano, advanced design methodologies, Industry 4.0, smart manufacturing, thermodynamics, mechatronics, robotics, soft computing, and automation. The contents of this book are useful to the researchers and professionals working in the different areas of mechanical engineering.

Catalogue, **Practical Mechanical Engineering** Carl Stephen Dow, 1908 *Automobile Engineering* Dr. Sushil Kumar Choudhary, Dr. Pramod Kumar Mishra. Automobile engineering is the one of the subject of mechanical and automobile engineering branch. It deals with the various types of automobiles, their mechanism of transmission systems and its applications. Basically, all the types of vehicles work on the principle of internal combustion processes. Different types of fuels are burnt inside the cylinder at higher temperature to get the transmission motion in the vehicles. It deals with the design and creation of vehicles used as means of transportation by road. Essentially, it derived from mechanical engineering. More specifically, it is the branch of engineering that deals with the design, development, manufacturing, production, testing, repairing, control, and management of automobiles. It is a combination of different elements of mechanical engineering, electrical engineering, electronic engineering, software engineering, and safety engineering. Therefore, every mechanical and automobile engineering student should have the knowledge of automobile engineering, its mechanism, and its various applications. This Automobile engineering lab manual deals with everything about automobiles and practices to propel them.
