**The Planting Design Handbook**, 2017-07-05 Since the first edition was published in 1992 Nick Robinson's *The Planting Design Handbook* has been widely used as a definitive text on landscape architecture courses throughout the world. It examines the horticultural, ecological and aesthetic characteristics of plants, discusses the structural and decorative roles of planting, spatial composition, species selection, planting plans and spacing, and the vital role of management. With its fresh look at aesthetic principles and its analysis of the design process, it reveals how a systematic approach can allow the greatest freedom for the creative imagination. This revised second edition still provides a complete examination of both the principles and the practice of design with plants for public, institutional and private landscapes, taking account of developments in professional practice and reflecting a variety of media and approaches currently used. It incorporates conceptual design approaches to planting, a range of design methods as well as tried and tested analytical and objective procedures, and a wide range of new international examples of planting design. The ecological basis for planting design has been broadened to include examples from warm temperate and subtropical vegetation types as well as those of the cool temperate and Mediterranean climate area. The layout of the book is clear and spacious with colour illustrations. While retaining the beautiful and detailed line drawings of the Chinese architect and painter Jia Hua Wu, it includes an international range of new photographs and professional drawings updated since the second edition. These illustrate a range of media now effective and useful in professional practices of various sizes. Green Urbanism Down Under Timothy Beatley, Peter Newman, 2012-09-26

In this immensely practical book Timothy Beatley sets out to answer a simple question: what can Americans learn from Australians about greening city life? *Green Urbanism Down Under* reports on the current state of sustainability practice in Australia and the many lessons that U.S. residents can learn from the best Australian programs and initiatives. Australia is similar to the United States in many ways, especially in its energy footprint. For example, Australia's per capita greenhouse gas emissions are second only to those of the United States. A similar percentage of its residents live in cities: 85 percent in Australia vs 80 percent in the United States. And it suffers from parallel problems of air and water pollution, a national dependence on automobiles and high fossil fuel consumption. Still, after traveling throughout Australia, Beatley finds that there are myriad creative responses to these problems and that they offer instructive examples for the United States. *Green Urbanism Down Under* is a very readable collection of solutions. Although many of these innovative solutions are little known outside Australia, they all present practical possibilities for U.S. cities. Beatley describes green transport projects, city farms, renewable energy plans, green living programs and much more. He considers a host of public policy initiatives and scrutinizes regional and state planning efforts for answers. In closing, he shares his impressions about how Australian results might be applied to U.S. problems. This is a unique book, hopeful, constructive and filled with ideas that have been proven to work. It is a must read for anyone who cares about the future of American cities. SSC, United States. Ship Structure Committee, 1997
