

AP Biology - Cell Membrane Structure and Transport POGIL**1) The Phospholipid Bilayer**

The Phospholipid Bilayer is the primary component of the cell membrane which encompasses every cell in the body. It also makes up vesicles and the membranes that surround many of the cell's organelles. The bilayer is made up of molecules called Phospholipids which are *Hybrid Molecules* meaning they have two regions which vary significantly in their ability to interact with other substances. Phospholipid construction takes place in the Smooth Endoplasmic Reticulum.

One side of the Phospholipid molecule is **Hydrophilic** (head region) meaning it is able to interact with water. Since this region is polar, it is also able to interact with any substance which has an electrical charge (+ or -). The other region is made up of two, non-polar, **hydrophobic** tails composed of fatty acids. These regions are unable to interact with water or any other polar substances or electrical charges.

Since the inside and outside of a cell are aqueous (water-based) environments, the phospholipids will automatically arrange themselves in a manner in which the hydrophilic heads are pointing out, interacting with the water, and the hydrophobic tail regions are pointing in towards each other, preventing the tails from interacting with the water. This arrangement produces a flexible barrier which contains an entirely hydrophobic center. We call this a *Semi-Permeable* barrier due to certain substances being able to cross it and others being blocked.

- a) Where do we find Phospholipid Bilayers in cells, and where are they constructed?

Plasma membrane, Smooth endoplasmic reticulum

- b) On the Phospholipid Bilayer above, label the region above the Bilayer as *Outside of the Cell* and the bottom region as *Inside of the Cell*. Also label a single phospholipid showing where the hydrophilic head and hydrophobic tails are located. Lastly, label the polar and nonpolar regions on the phospholipid.

Membrane Transport Packet Answers Pogil

Membrane Transport Packet Answers Pogil:

Adopting the Melody of Term: An Psychological Symphony within **Membrane Transport Packet Answers Pogil**

In some sort of consumed by displays and the ceaseless chatter of quick communication, the melodic beauty and mental symphony developed by the written word usually disappear in to the background, eclipsed by the relentless sound and disruptions that permeate our lives. But, nestled within the pages of **Membrane Transport Packet Answers Pogil** a charming literary treasure full of fresh emotions, lies an immersive symphony waiting to be embraced. Crafted by a masterful composer of language, that charming masterpiece conducts viewers on an emotional journey, well unraveling the hidden songs and profound impact resonating within each cautiously crafted phrase. Within the depths of the poignant evaluation, we will discover the book is central harmonies, analyze their enthralling writing design, and submit ourselves to the profound resonance that echoes in the depths of readers souls.
