Ezswitchsetup Administrators Guide:

IBM b-type Gen 5 16 Gbps Switches and Network Advisor Jon Tate, Kameswara Bhaskarabhatla, Bruno Garcia Galle, Paulo Neto, IBM Redbooks, 2014-05-09 IBM System Storage Gen 5 fabric backbones are among the industry's most powerful Fibre Channel switching infrastructure offerings. They provide reliable, scalable and high performance foundations for mission critical storage. These fabric backbones also deliver enterprise connectivity options to add support for IBM FICON connectivity, offering a high performing and reliable FICON infrastructure with fast and scalable IBM System z servers. Designed to increase business agility while providing nonstop access to information and reducing infrastructure and administrative costs, Gen 5 Fibre Channel fabric backbones deliver a new level of scalability and advanced capabilities to this robust, reliable and high performance technology. Although every network type has unique management requirements, most organizations face similar challenges managing their network environments. These challenges can include minimizing network downtime, reducing operational expenses, managing application service level agreements (SLAs) and providing robust security. Until now, no single tool could address these needs across different network types. To address this issue, the IBM Network Advisor management tool provides comprehensive management for data storage and converged networks. This single application can deliver end-to-end visibility and insight across different network types by integrating with Fabric Vision technology; it supports Fibre Channel SANs including Gen 5 Fibre Channel platforms, IBM FICON and IBM b-type SAN FCoE networks. In addition, this tool supports comprehensive lifecycle management capabilities across different networks through a simple, seamless user experience. This IBM Redbooks publication introduces the concepts, architecture and basic implementation of Gen 5 and IBM Network Advisor. It is aimed at system administrators and pre and post sales support staff.

Implementing IBM FlashSystem 840 Karen Orlando, Detlef Helmbrecht, Jon Herd, Carsten Larsen, Matt Levan, IBM Redbooks, 2015-07-09 Almost all technological components in the data center are getting faster: central processing units, networks, storage, area networks, SANs and memory. All of them have improved their speed by a minimum of 10X, some of them by 100X. For example, data networks. However, spinning disk performance has only increased by 1.2 times. IBM FlashSystem™ 840 version 1.3 closes this gap. The FlashSystem 840 is optimized for the data center to enable organizations of all sizes to strategically harness the value of stored data. It provides flexible capacity and extreme performance for the most demanding applications, including virtualized or bare metal online transaction processing (OLTP) and online analytical processing (OLAP), databases, virtual desktop infrastructures (VDI), technical computing applications and cloud environments. The system accelerates response times with IBM MicroLatency access times as low as 90 µs write latency and 135 µs read latency to enable faster decision making. The introduction of a low capacity 1 TB flash module allows the FlashSystem 840 to be configured in capacity points as low as 2 TB in protected RAID 5 mode. Coupled with 10 GB iSCSI, the FlashSystem is positioned to bring extreme performance to small and medium sized businesses, SMB and growth markets. Implementing the

IBM FlashSystem 840 provides value that goes beyond those benefits that are seen on disk based arrays These benefits include better user experience server and application consolidation development cycle reduction application scalability data center footprint savings and improved price performance economics This IBM Redbooks publication discusses IBM FlashSystem 840 version 1 3 It provides in depth knowledge of the product architecture software and hardware its implementation and hints and tips Also illustrated are use cases that show real world solutions for tiering flash only and preferred read as well as examples of the benefits gained by integrating the FlashSystem storage into business environments Also described are product integration scenarios running the IBM FlashSystem 840 with the IBM SAN Volume Controller and the IBM Storwize family of products such V7000 V5000 and the V3700 as well as considerations when integrating with the IBM FlashSystem 840 The preferred practice guidance is provided for your FlashSystem environment with IBM 16 Gbps b type products and features focusing on Fibre Channel design This book is intended for pre sales and post sales technical support professionals and storage administrators and for anyone who wants to understand and learn how to implement this exciting technology

Implementing or Migrating to an IBM Gen 5 b-type SAN Mirza Baig,Liam Dowds,Silviano Gaona,Paulo Neto,Gaston Rius,Megan Gilge,IBM Redbooks,2016-08-05 The IBM b type Gen 5 Fibre Channel directors and switches provide reliable scalable and secure high performance foundations for high density server virtualization cloud architectures and next generation flash and SSD storage They are designed to meet the demands of highly virtualized private cloud storage and data center environments This IBM Redbooks publication helps administrators learn how to implement or migrate to an IBM Gen 5 b type SAN It provides an overview of the key hardware and software products and explains how to install monitor tune and troubleshoot your storage area network SAN Read this publication to learn about fabric design managing and monitoring your network key tools such as IBM Network Advisor and Fabric Vision and troubleshooting

Implementing an IBM b-type SAN with 8 Gbps Directors and Switches Jon Tate,Uwe Dubberke,Michael Engelbrecht,Shanmuganthan Kumaravel,Jose Rodriguez Ruibal,IBM Redbooks,2011-04-01 Do everything that is necessary and absolutely nothing that is not This IBM Redbooks publication written at a Data Center Fabric Manager v10 1 4 and Fabric Operating System v6 4 level consolidates critical information while also covering procedures and tasks that you are likely to encounter on a daily basis when implementing an IBM b type SAN The products that we describe in this book have more functionality than we can possibly cover in a single book A storage area network SAN is a powerful infrastructure for consolidation distance solutions and data sharing The quality applications that the IBM SAN portfolio provides can help you take full advantage of the benefits of the SAN In this book we cover the latest additions to the IBM b type SAN family and show how you can implement them in an open systems environment In particular we focus on the Fibre Channel Protocol FCP environment We address the key concepts that these products bring to the market and in each case we provide an overview of the functions that are essential to building a robust SAN environment
