Flexible Automation in Japan J. Hartley, 2013-04-09 Much has been said and written about Japan's manufacturing prowess. Most of the comment comes from people who are merely visitors to the country and can be best classified as observers looking in from the outside. Other views come from the Japanese themselves in which the double barrier of culture and language filters out much information that would be of real value to Western industrialists. Neither of these limitations apply to John Hartley who has been resident in Japan for the past five years. He understands the culture, can speak the language and has extensive contacts at the highest level. Therefore he is in a unique position to report on the Japanese scene and its activities in advanced manufacturing technology. This he has been doing on a regular basis to IFS magazines *The Industrial Robot*, *Assembly Automation*, *Sensor Review* and *The FMS Magazine*. Most of the material in this book is from John Hartley's pen and represents his most significant contributions on flexible automation in Japan to these journals over the last three years. It is augmented with a few other articles written by leading authorities on new technology in Japanese manufacturing industry.

Springer Handbook of Automation Shimon Y. Nof, 2023-06-16 This handbook incorporates new developments in automation. It also presents a widespread and well structured conglomeration of new emerging application areas such as medical systems and health transportation, security and maintenance service, construction and retail as well as production or logistics. The handbook is not only an ideal resource for automation experts but also for people new to this expanding field.

Handbook of Manufacturing Systems and Design Uzair Khaleeq uz Zaman, Ali Siadat, Aamer Ahmed Baqai, Kanwal Naveed, Atal Anil Kumar, 2023-08-24 This book provides a comprehensive overview of manufacturing systems, their role in product process design and their interconnection with an Industry 4.0 perspective, especially related to design, manufacturing and operations. *Handbook of Manufacturing Systems and Design: An Industry 4.0 Perspective* provides the knowledge related to the theories and concepts of Industry 4.0. It focuses on the different types of manufacturing systems in Industry 4.0 along with associated design and control strategies. It concentrates on the operations in Industry 4.0 with a particular focus on supply chain, logistics, risk management and reverse engineering perspectives. Offering basic concepts and applications through to advanced topics, the handbook feeds into the goal of being a source of knowledge as well as a vehicle to explore the future possibilities of design techniques, methods and operations associated with Industry 4.0. Concepts with practical applications in the form of case studies are added to each chapter to round out the many attributes this handbook offers. This handbook targets students, engineers, managers, designers and manufacturers and will assist in their understanding of the core concepts of manufacturing systems in connection with Industry 4.0 and optimize alignment between supply and demand in real time for effective implementation of the design concepts.
